
Supplemental Figure 6 – Mathematical modeling of WOX5, SHR/SCR, and CYCD6;1. Model simulation of the estimated expression of *WOX5*, *SHR/SCR*, and *CYCD6;1* in the QC and CEI. Low levels of the *SHR/SCR* complex and low levels of *WOX5* are considered to trigger QC divisions. High levels of *CYCD6;1* are considered to trigger CEI divisions.
