

In this manual you can find some steps regarding the use of the smartphone and the SEMA³ application (the application from which you should receive signals).

Unlocking the smartphone			
<p>1. I press the unlock button (= not the long button, but the small button) on the right side of my smartphone.</p>	<p>2. I swipe my finger on the screen from bottom to top. I make sure I start well at the bottom and make a big move upwards.</p>	<p>3. If numbers appear, I enter my PIN code. OR If no numbers appear, I go to step 4.</p>	<p>4. My smartphone is unlocked. I see various coloured dots (= applications).</p>
			
<p>5. If I swipe my finger on the screen from bottom to top, I can see all the applications.</p>		<p>IN GENERAL: If I want to return, I tap the arrow at the bottom left with my finger. When I have finished using my smartphone, I press the unlock button again as in step 1, which darkens the screen.</p>	

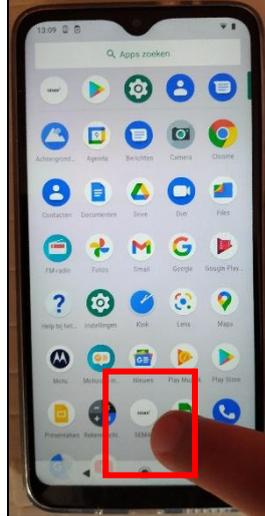

Synchronize

1. My smartphone is connected to the internet. (When I am at home, my smartphone automatically connects to my own internet.)

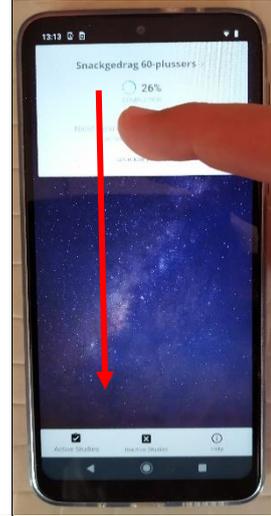

2. I unlock my smartphone (see *unlocking*) and look for SEMA³ (= the white icon with 'SEMA³' in black letters).

3. I open SEMA³ by tapping on the white icon with 'SEMA³' in black letters with my finger.

4. I swipe down by swiping my finger on the screen from top to bottom.

5. If I do it right, a round symbol, which stands for 'loading', will appear briefly at the top of the screen. Now my smartphone is synchronized.

Quit the SEMA³ application COMPLETELY

1. I unlock my smartphone (see *unlocking*).

2. I tap my finger on the square at the bottom right of the screen.

3. My smartphone zooms out and I see all open tabs. If the SEMA³ tab is not central, I swipe my finger left/right until the tab is central.

4. I swipe my finger from the bottom to the top of the screen. I see the SEMA³ tab move up and appear. The SEMA³ application is now completely closed.
