¹² **Supplementary Tables**

¹³ **Table S1:** Mean bias in air temperature at 35 sites over the Greenland ice sheet. (p. 3)

¹⁴ **Table S2:** Mean bias and RMSE in air temperature under different wind conditions. (p. 4)

Table S1. Mean bias ($^{\circ}\text{C}$) in air temperature between RCMs (MAR, RACMO, and ERA5) and daily observations at each site of the GC-Net and PROMICE weather station networks. Statistics are given for the whole period (1996–2020) and for the four seasons. Elevation (Elev) is given in m a.s.l.. Mean biases $\geq 1.00^{\circ}\text{C}$ and $\leq -1.00^{\circ}\text{C}$ are in bold.

	Elev	MAR					RACMO					ERA5

Table S2. Mean bias (MB) and root-mean-square error (RMSE) in °C between RCMs (MAR, RACMO, and ERA5) and the two climate networks used in this study (GC-Net and PROMICE) computed over the whole study period (all), over the period between September and May (non JJA), over the summer (JJA), and over the summer but using only days with average wind speed greater than 2.5, 5.0, or 7.5 m s⁻¹ (JJA > 2.5 m s⁻¹, etc).

		MAR		RACMO		ERA5	
	N	RMSE	MB	RMSE	MB	RMSE	MB
