

First genetic characterisation and phylogenetic position of *Aplectana hylambatis* (Nematoda: Cosmocercidae), infecting *Pithecopus azureus* (Anura: Hylidae) from the Brazilian Pantanal
P.S. dos Santos, I.C.O. Silva, V.L. Ferreira, L.E.R. Tavares, F. Paiva, and F.B. Pereira

Table S1. Genetic sequences of nematodes of the family Cosmocercidae and of the outgroup, used for phylogenetic reconstructions, associated with the genetic markers and GenBank accession numbers.

TAXON	18S rDNA	28S rDNA
<i>Aplectana chamaeleonis</i>	OK045518	OK045533
<i>Aplectana dayaoshanensis</i>	OK045516	OK045530
<i>Aplectana hylambatis</i>	PQ037030	PQ037031
<i>Aplectana xishuangbannaensis</i>	MW329991	MW329038
<i>Cosmocerca ornata</i>	MW326676	MW326675
<i>Cosmocerca simile</i>	MN839758	MN839755
<i>Cosmocercoides dukae</i>	FJ516753	-
<i>Cosmocercoides pulcher</i>	MH178322	LC018444
<i>Cosmocercoides qingtianensis</i>	MH032769	MW325956
<i>Cosmocercoides tonkinensis</i>	AB908160	AB908160
<i>Cosmocercoides wuyiensis</i>	MK110872	-
<i>Dichelyne grandistomis</i> *	KX752094	KX752093
<i>Nemhelix bakeri</i>	DQ118537	-

*Used as an outgroup. This species appears as *Cucullanus grandistomis* in GenBank.

Table S2. Comparative morphometry of *Aplectana hylambatis* from previous taxonomic studies carried out in South America (mainly Argentina), and from the original description. Measurements are in micrometres, unless otherwise indicated.

*Distance from anterior end.

^bThese hosts were collected from different localities in Argentina, the measurements are presented as minimum and maximum values considering all of them.

**Ratio to total body length.

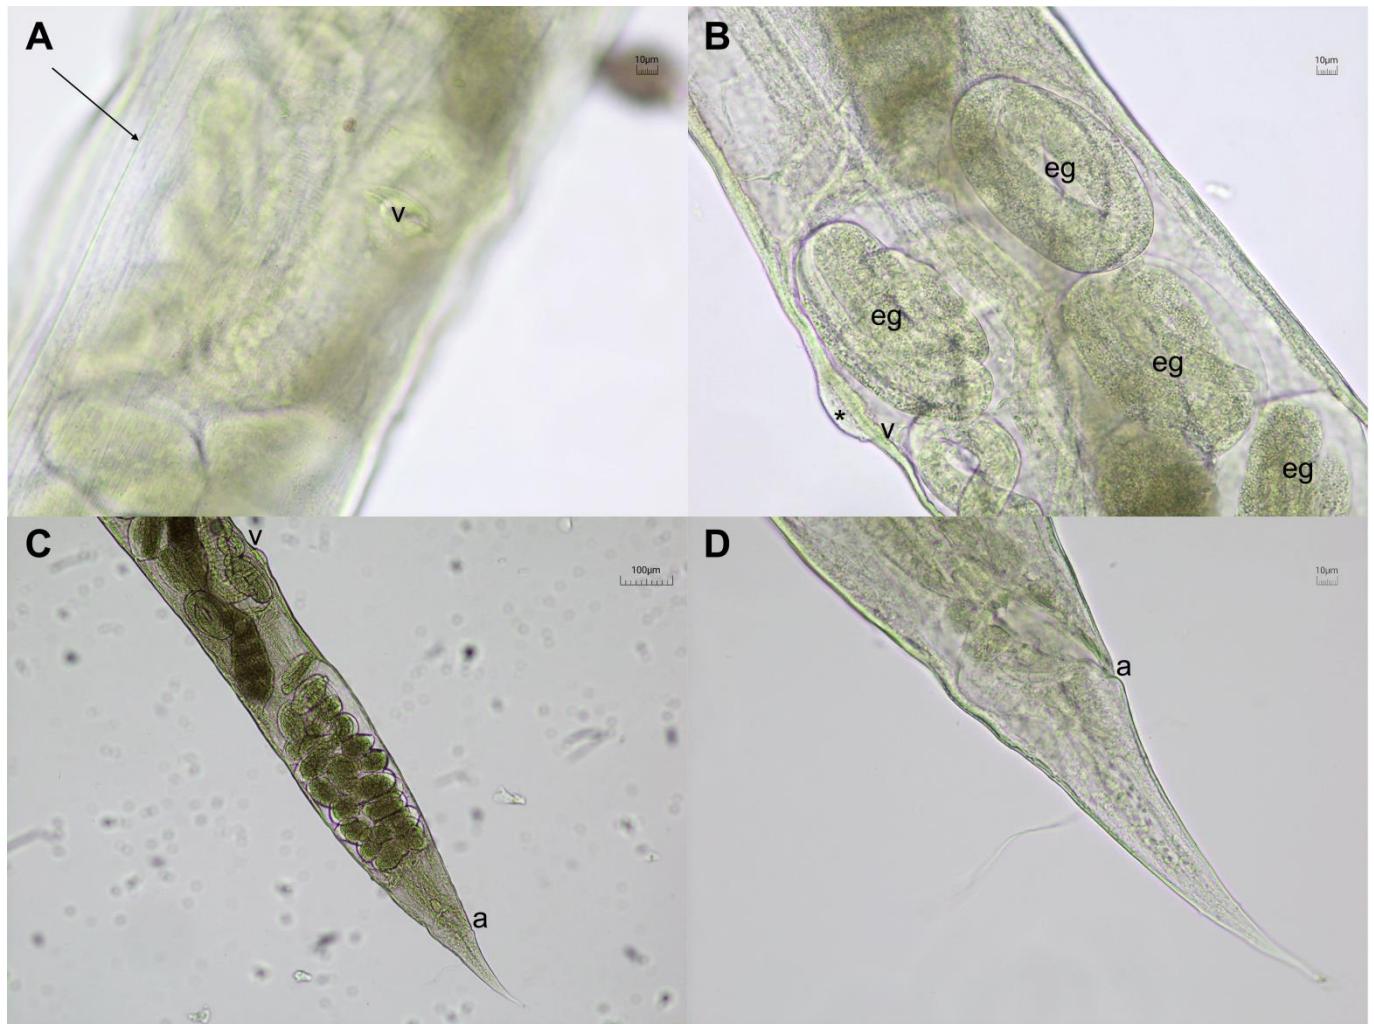

Abbreviations: L = length; W = width; NM = not measured

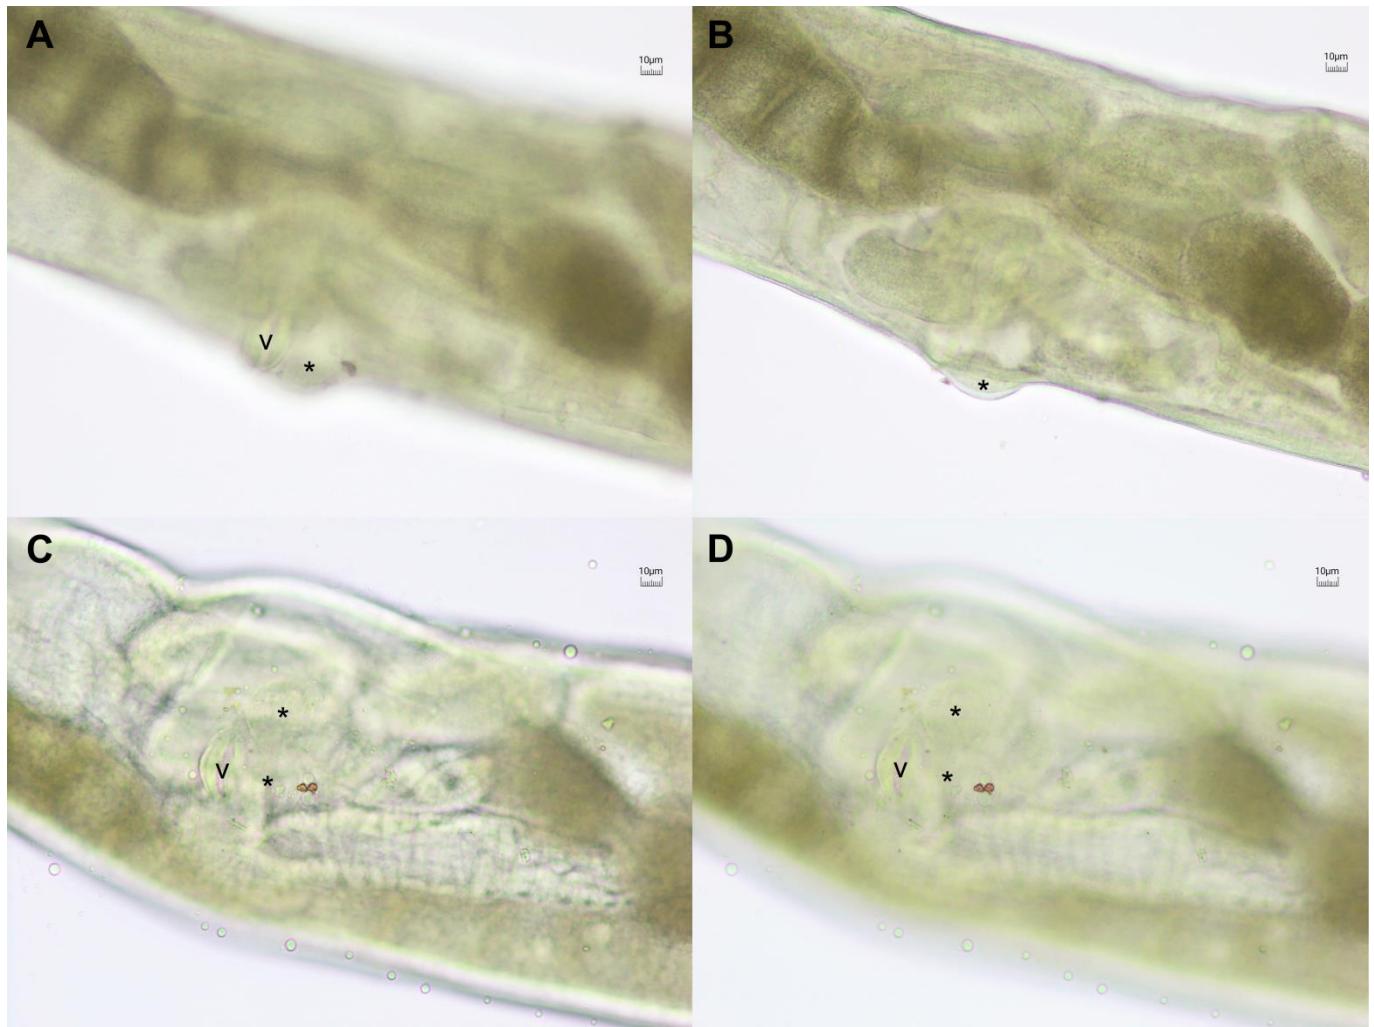

Supplementary Figure S1. *Aplectana hylambatis* parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Line drawings: A, B, posterior and tail end of male showing number and arrangement of caudal papillae, ventral views; C, spicule showing the point of articulation at the distal part, lateral view; D, gubernaculum, lateral view; E, F, region of vulva from two different females showing the number and arrangement of mamelon-like structures, ventral views.

Supplementary Figure S2. *Apletana hylambatis* parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Light micrographs: A, anterior end, lateral view (arrowhead indicates excretory pore); B, posterior end of oesophagus, lateral view (arrowhead indicates excretory pore); C, D, anterior end, sublateral views (arrow indicated lateral ala). Abbreviation: nr = nerve ring.

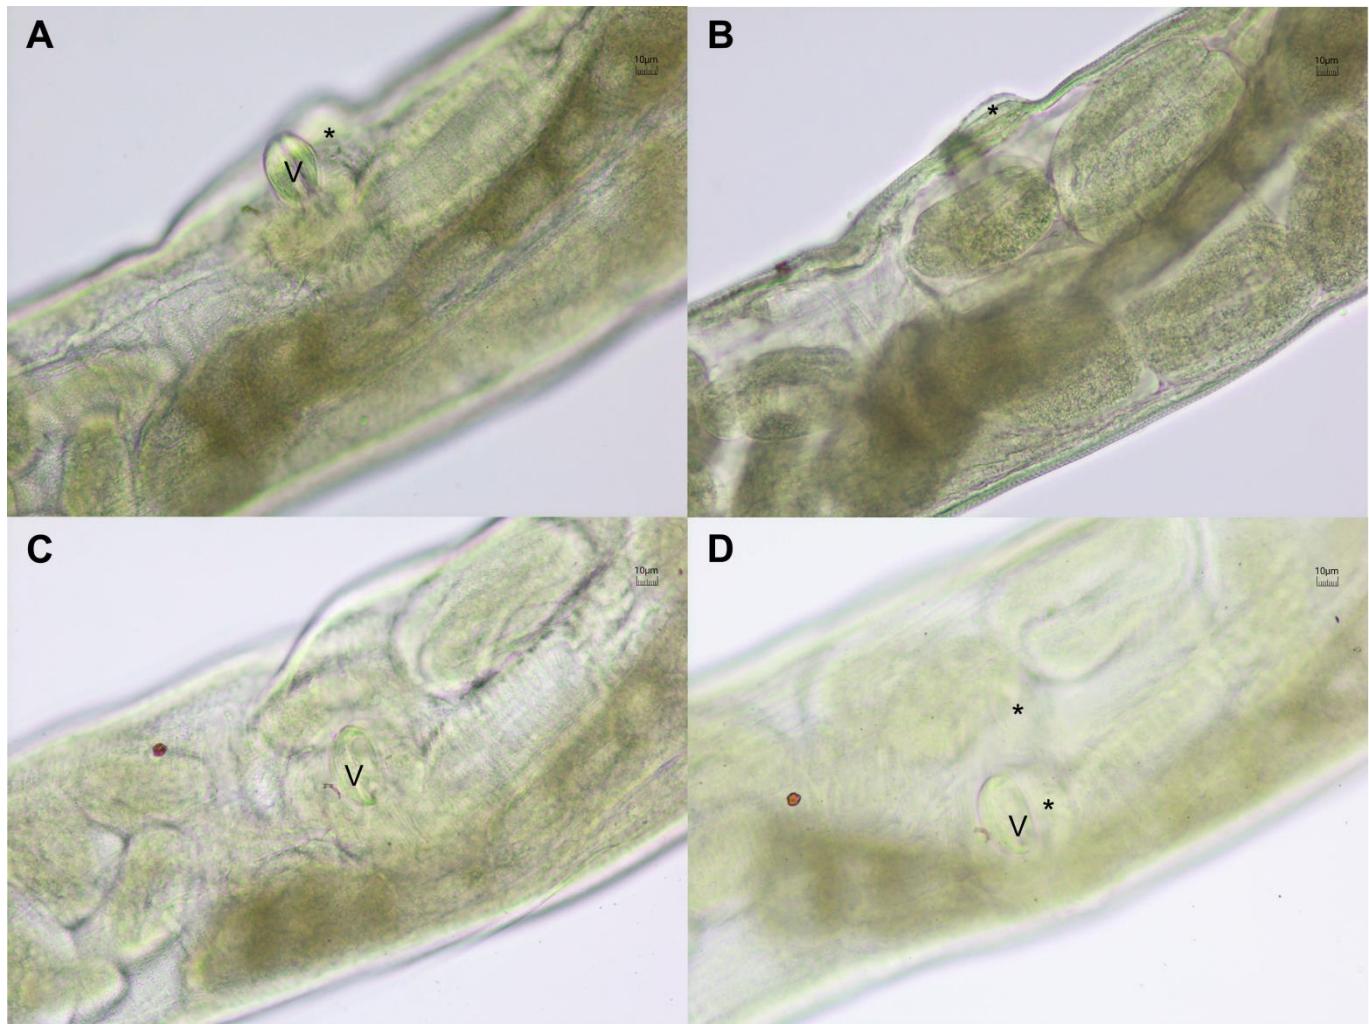

Supplementary Figure S3. *Aplectana hylambatis* female parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Light micrographs: A, B, vulvar region subventral and lateral views, respectively (arrow indicates lateral ala; asterisk indicated mamelon-like structure); C, posterior end, lateral view; D, tail, lateral view. Abbreviations: a = anus; eg = egg containing larva; v = vulva.

Supplementary Figure S4. *Aplectana hylambatis* female parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Light micrographs: A, B, vulvar region, subventral view (asterisks indicate mamelon-like structures); C, D, vulvar region, ventral view (asterisks indicate mamelon-like structures).

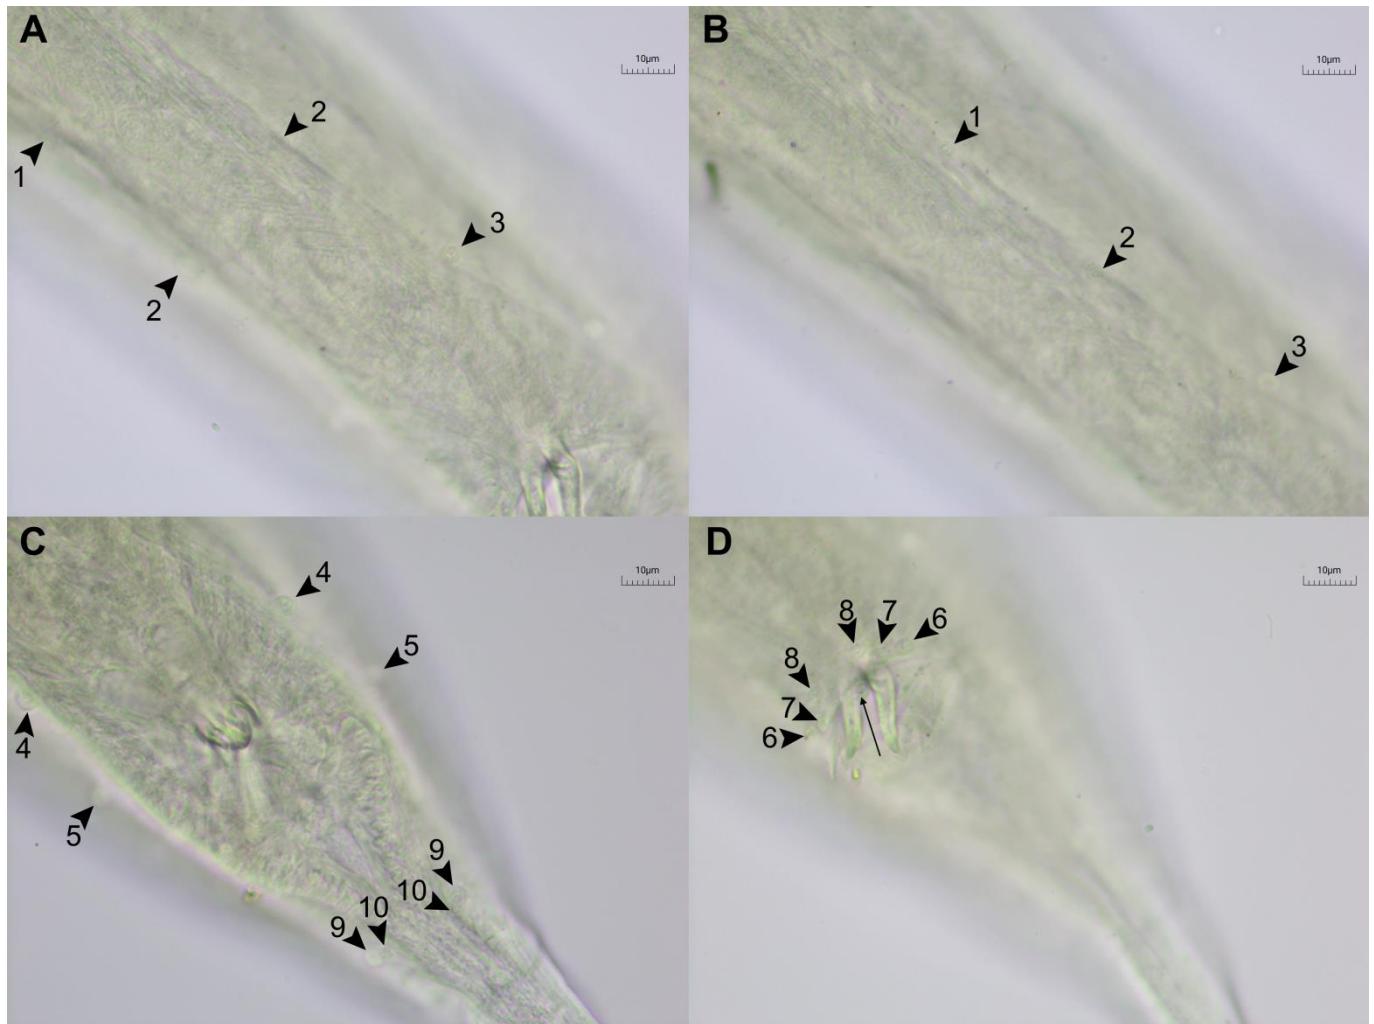

Abbreviations: v = vulva.

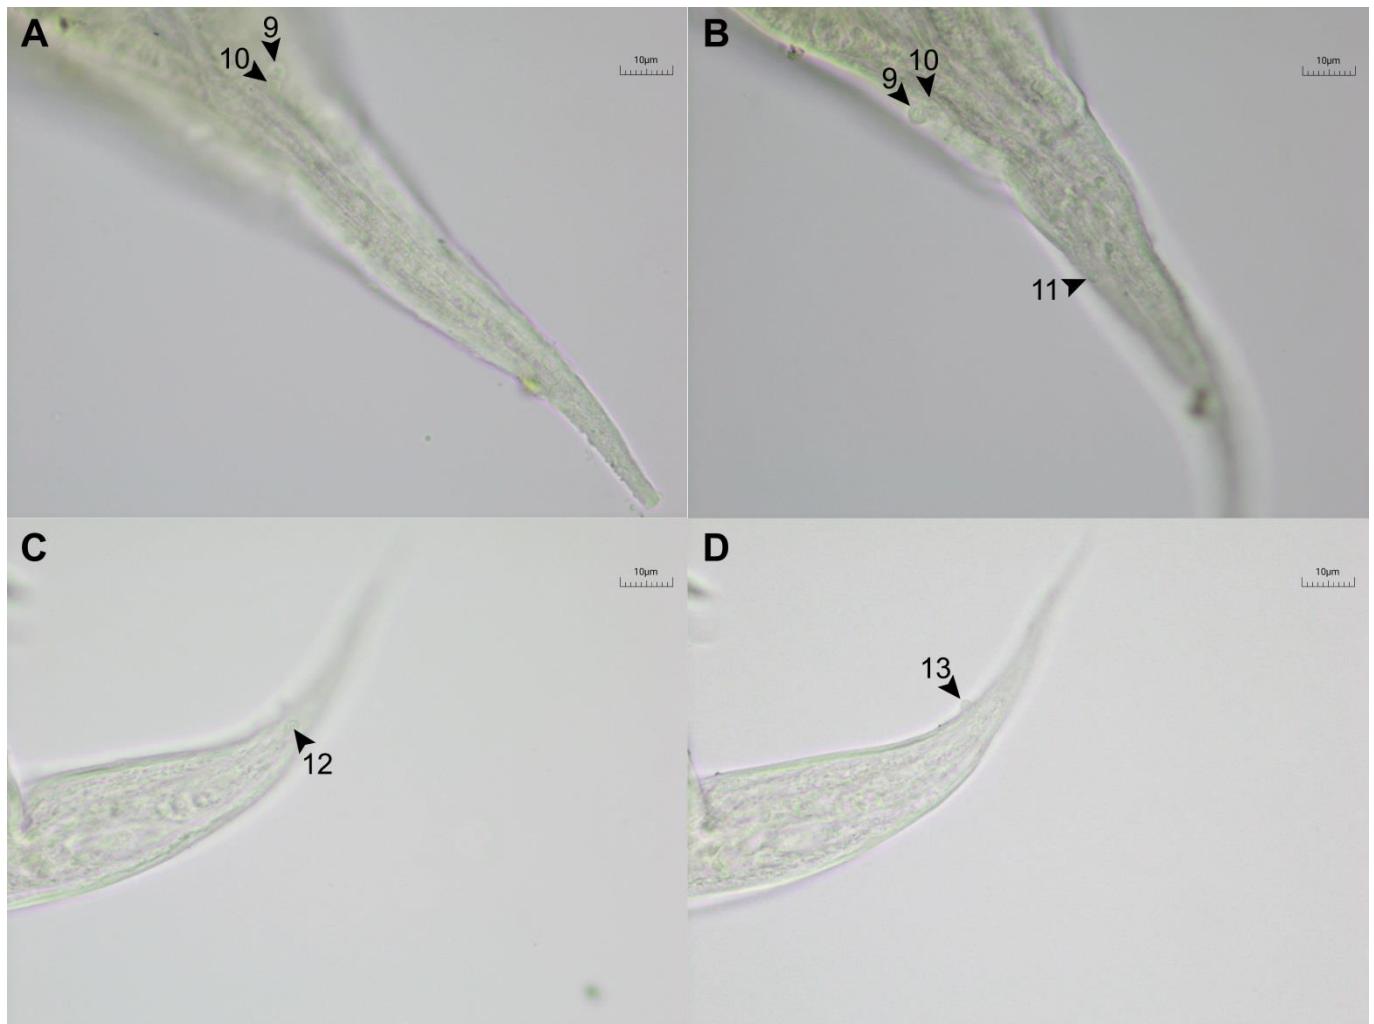

Supplementary Figure S5. *Aplectana hylambatis* female (different from that showed in Figure S3) parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Light micrographs: A, B, vulvar region, subventral view (asterisk indicate mamelon-like structure); C, D, vulvar region, ventral view (asterisks indicate mamelon-like structures). Abbreviations: v = vulva.

Supplementary Figure S6. *Aplectana hylambatis* male parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Light micrographs: A, whole specimen, lateral view; B, Anterior end, lateral view; C, D, posterior end, lateral and ventral views (arrowheads indicate caudal papillae; arrow indicates articulation point at distal part of the spicule). Abbreviations: e = spicule; g = gubernaculum.

Supplementary Figure S7. *Aplectana hylambatis* male parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Light micrographs: A, B, posterior end showing precloacal papillae, subventral views (arrowheads indicate caudal papillae); C, D, cloacal region, subventral views (arrowheads indicate caudal papillae; arrow indicates the large unpaired precloacal papilla). Caudal papillae are numbered according to pairs from the first to the tenth.

Supplementary Figure S8. *Aplectana hylambatis* male parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Light micrographs: A, B, tail end, ventral views (arrowheads indicate caudal papillae); C, D, tails end, lateral views (arrowheads indicate caudal papillae). Caudal papillae are numbered according to pairs from the ninth to the thirteenth.

Supplementary Figure S9. *Aplectana hylambatis* male parasite of *Pithecopus azureus* from Pantanal wetlands, Brazil. Scanning electron micrographs: A, posterior end, ventral view (arrowheads indicate articulated distal part of the spicules); B, tail, lateral view (arrowhead indicates articulated distal part of the spicule); C tail, ventral view (arrowheads indicate articulated distal part of the spicules). Note that lateral ala is visible in the micrographs A and C.

Supplementary Material S1. [Genetic alignment, output of bModelTest, output of BEAST2 after running the MCMC in 2 runs and raw phylogenetic trees from the present study.](#)
