## A Ethics, Descriptive Statistics, and Main Results

### A.1 Research Ethics

This research is based on information obtained through human subjects in three public opinion surveys on U.S. adults. Since one of the researchers was directly involved in the creation of the survey instrument and its contents, they obtained ethical approval in the two Lucid surveys in Study 2, whereas Study 1 was conducted and organized through CCES and YouGov, a third-party vendor who sold the data to the researcher as a secondary data user.

Respondents in Study 1 come from a module purchased in the 2018 Cooperative Congressional Election Study (CCES), which purchased survey data from a third party vendor, YouGov. For this survey, independent ethical approval was not obtained by the researchers. Informed consent was obtained from respondents in the CCES 2018 survey, and they were informed that their participation was voluntary and that they could skip any questions or withdraw from the survey at any point in time. They were

also made aware that their confidentiality would be maintained. Finally, respondents were compensated by YouGov directly.

Respondents in Study 2 come from two public opinion surveys conducted in June 17–July 7, 2019 and August 17–August 20, 2020 through Lucid. Ethical approval was obtained for both studies at one of the researchers' home institutions on June 14, 2019 (#STUDY00001195) and on August 17, 2020 (#STUDY00004933). Both studies were determined to be exempt. The two surveys were hosted Qualtrics, and survey respondents from Lucid's opt-in panel took the survey. Lucid contracted with one of the researchers, and then Lucid directly compensated respondents for their participation in the survey. In both studies, respondents gave informed consent before proceeding with the survey instrument. Respondents were made aware of the purpose of the research, plans for privacy of their respondents and information on how their confidentiality would be maintained, the voluntariness of their participation and their rights to withdraw at any time, information on compensation, and email and phone contact information for both the researcher and the institution's IRB. In both surveys, survey participants understood that they were taking part in a research study.
