

Supplementary Figure 1. SIPS scores at baseline, 8weeks and 1 year after treatment

1A. Total score of positive symptoms(PTAL); 1B. Total score of negative symptoms (NTAL); 1C. Total score of disorganization symptoms(DTAL) ;1D. Total score of general symptoms(GTAL); 1E. Differences in the total score of SOPs(SOPSTAL); 1F. Differences in the total score of Global Assessment of Functioning(GAF).

Data are expressed as mean \pm SD; Ari: Aripiprazole group; OLZ: Olanzapine group;

a = Decreased within the group compared to baseline, $p < 0.001$; b = Decreased within the group compared to baseline, $p < 0.05$;

Baseline: c = Aripiprazole versus Non-Antipsychotic, $p < 0.05$; d = Olanzapine versus Non-Antipsychotic, $p < 0.05$; e = Aripiprazole versus Olanzapine, $p < 0.05$.

Note. β :estimated effect; SE: Standard Error; F: F value;

PTAL: Total score of positive symptoms; NTAL: Total score of negative symptoms;

DTAL: Total score of disorganization symptoms; GTAL: Total score of general symptoms;

SOPSTAL: Total score of SOPS; GAF: Global Assessment of Functioning.

*indicates $p < 0.05$; **indicates $p < 0.01$; ***indicates $p < 0.001$
