Table S-1: Sample sizes by country

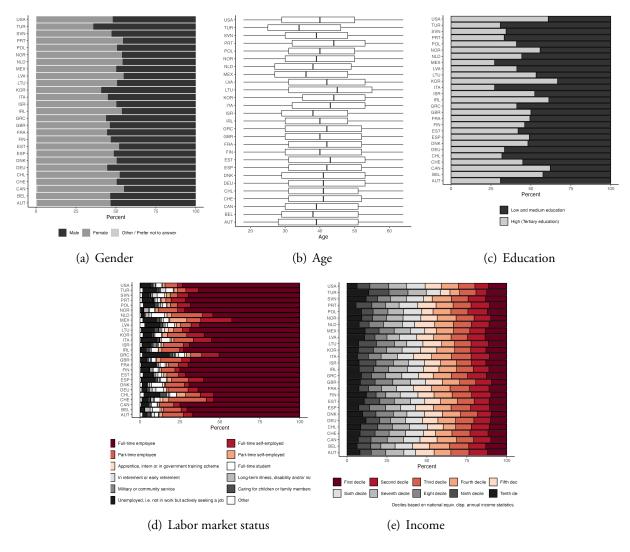

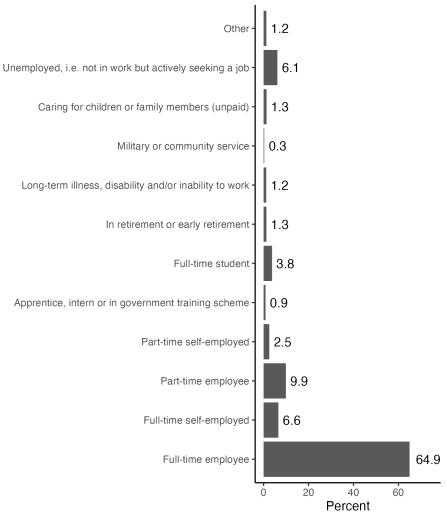

Figure S-2: Sample demographics per country

Only economically active or temporarily inactive respondents.

Figure S-3: Respondents' main activities

Notes: Respondents left after filtering out those who are not currently economically active and have no intention of becoming active.

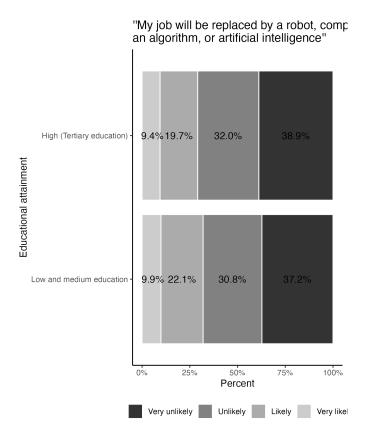

Figure S-4: Distribution of original technology risk variable across education

Items measuring being impacted by COVID-19 pandemic

- 1. "At any time during the first year of the COVID-19 pandemic, i.e. in 2020, did you experience any of the following?"
 - (a) Lost your job or been laid off permanently by your employer
 - (b) Been laid off temporarily by your employer or been placed on a full-time job retention scheme
 - (c) Had your working hours reduced by your employer or been placed on a part-time job retention scheme
 - (d) Had your pay reduced by your employer
 - (e) Lost your self-employed job or your own business
 - (f) Lost income from your self-employed job or your own business because of a drop in work, sales, or similar
 - (g) Had to take leave from work (paid or unpaid), or had to work reduced hours, for at least one week in order to look after children or an adult or elderly family member
 - (h) Had to take leave from work (paid or unpaid), or had to work reduced hours, for at least one week for other reasons
 - (i) Had to resign from your job due to own illness or advice or order to self- quarantine.
 - (j) Had to resign from your job in order to look after children or an adult or elderly family member
 - (k) Had to resign from your job for other reasons
- 2. "If you lived with a partner during the first year of the COVID-19 pandemic, i.e. 2020, did your cohabitating partner at the time experience any of the following?"
 - (a) Lose their job or been laid off permanently by their employer
 - (b) Get laid off temporarily by employer or been placed on a full-time job retention scheme
 - (c) Have working hours reduced by employer or been placed on a part-time job retention scheme
 - (d) Have pay reduced by employer
 - (e) Lose self-employed job or own business
 - (f) Lose income from self-employed job or own business because of a drop in work, sales, or similar
 - (g) Have to take leave from work (paid or unpaid), or had to work reduced hours, for at least one week in order to look after children or an adult or elderly family member
 - (h) Have to take leave from work (paid or unpaid), or had to work reduced hours, for at least one week for other reasons
 - (i) Have to resign from job due to own illness or advice or order to self-quarantine
 - (j) Have to resign from job in order to look after children or an adult or elderly family member
 - (k) Had to resign from job for other reasons

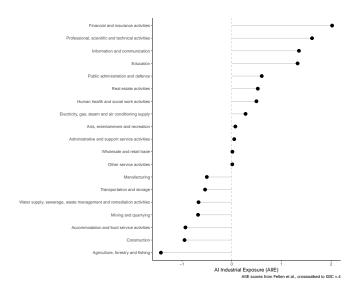

Figure S-5: Industry-level AI exposure (AIIE)

Note: AIIE scores are standardized to have mean = 0 and SD = 1 (see Felten, Raj, and Seamans 2021, 2201), which means that negative scores indicate "below average AI exposure", not "negative exposure".

2 Factor analysis of policy attitudes

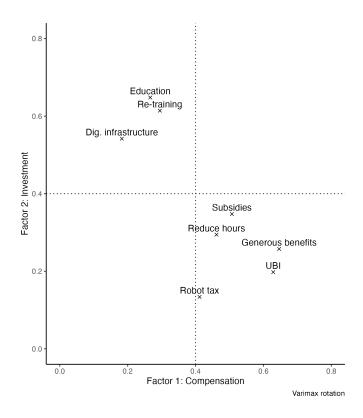

Figure S-6: Social policy attitude items and their loadings on two factors

Notes: Compare Busemeyer et al. (2023, 602).

3 Robustness checks & additional results

3.1 Analysis of party preferences

3.1.1 Marginal effects for main results

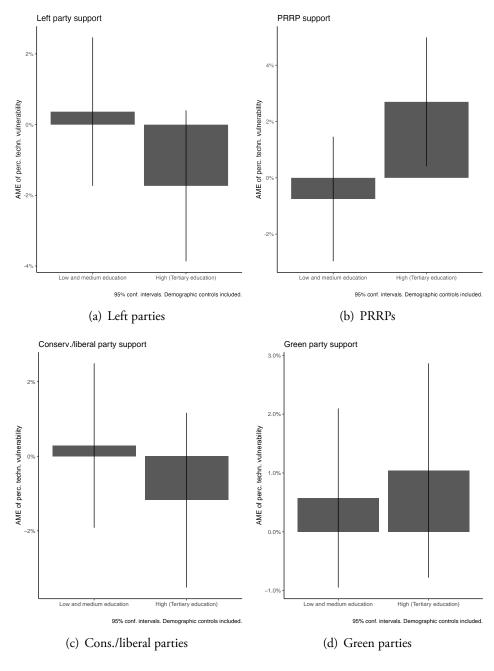

Figure S-7: Marginal effects of perceived technological vulnerability on party support

Notes: See Figure 2 in the main text for the corresponding predicted probabilities.

3.1.2 Main results without control variables

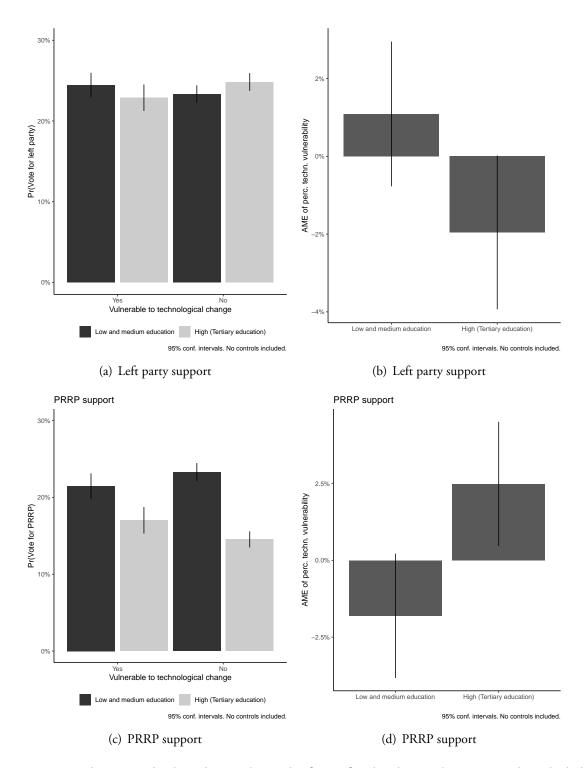

Figure S-8: Robustness checks: The conditional effects of technology risk, no controls included

Notes: See Tables S-3 and S-2 for the detailed estimation results.

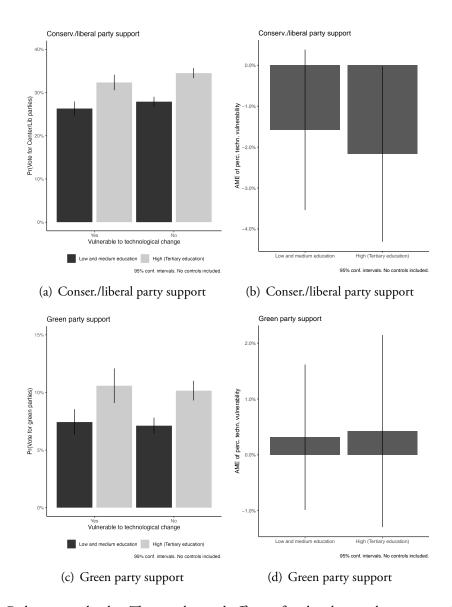

Figure S-9: Robustness checks: The conditional effects of technology risk, no controls included Notes: See Tables S-5 and S-4 for the detailed estimation results.

3.1.3 Controlling for AIIE instead of industry

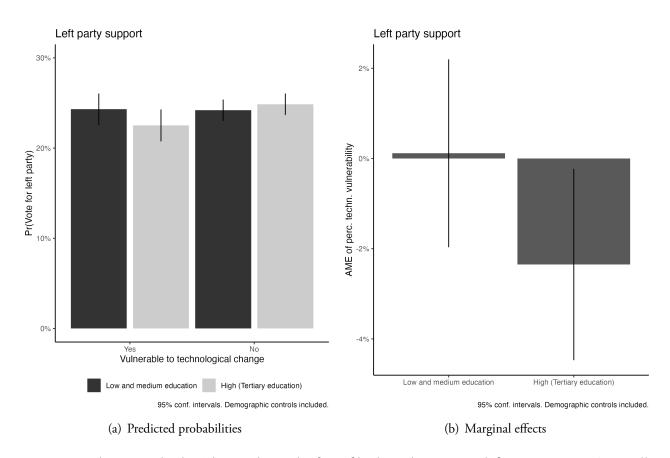

Figure S-10: Robustness checks: The conditional effect of higher education on left party support (controlling for AIIE)

Notes: See Table S-2 (Model 5) for the detailed estimation results.

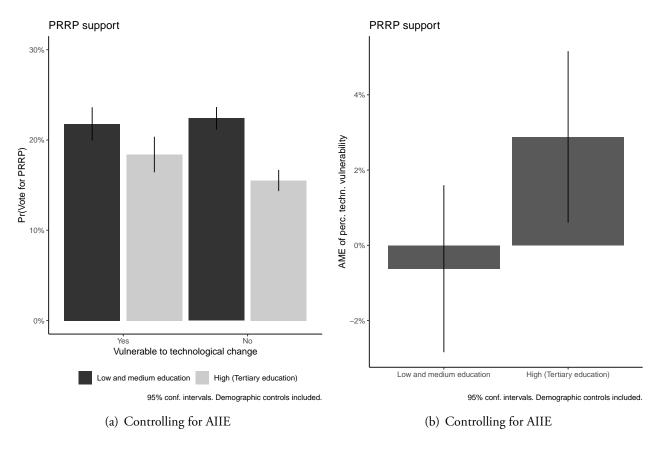

Figure S-II: Robustness checks: Technology risk conditions the effect of higher education on PRRP support *Notes:* See Table S-7 for the detailed estimation results.

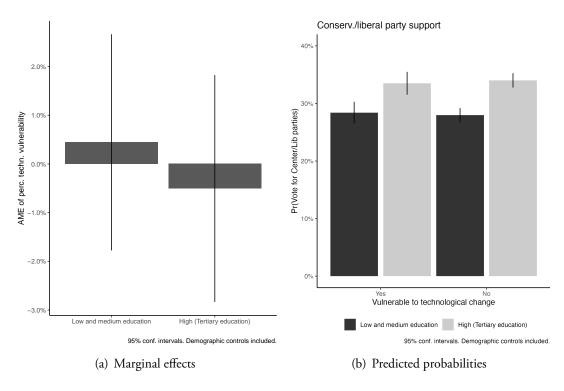

Figure S-12: Robustness checks: The conditional effect of higher education on center/liberal party support, controlling for AIIE

Notes: See Model 5 in Table S-4 for the detailed estimation results.

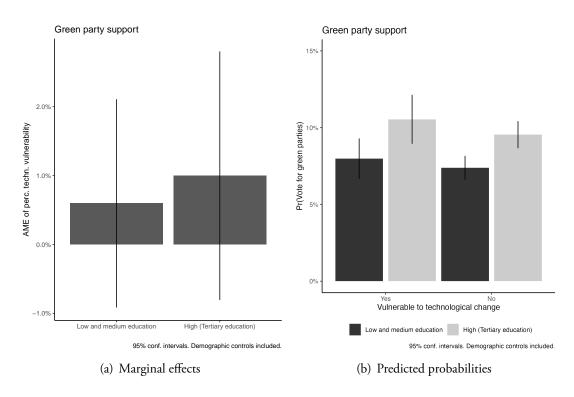

Figure S-13: Robustness checks: The conditional effect of higher education on green party support, controlling for AIIE

Notes: See Model 5 in Table S-5 for the detailed estimation results.

3.1.4 Differentiating between radical & mainstream left

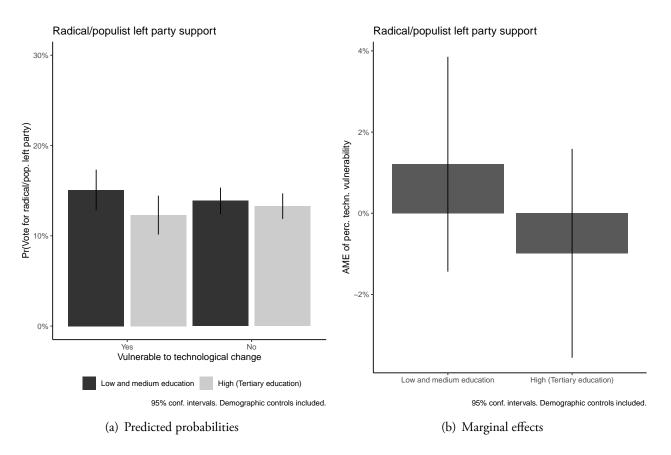

Figure S-14: Robustness checks: The conditional effect of higher education on support for radical/populist left parties

Notes: See Table S-6 for the detailed estimation results.

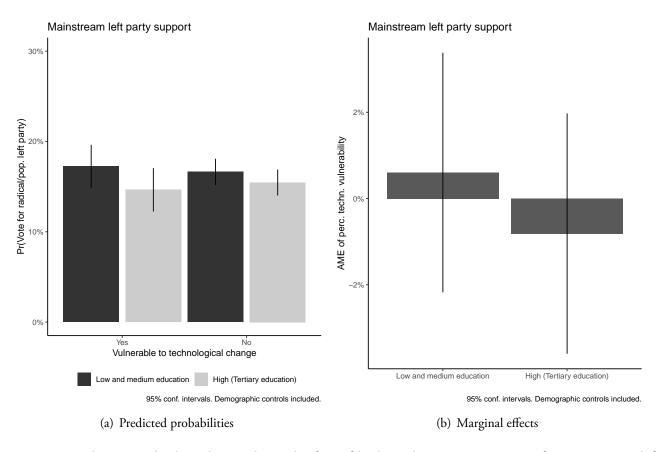

Figure S-15: Robustness checks: The conditional effect of higher education on support for mainstream left parties

Notes: See Table S-6 for the detailed estimation results.

3.1.5 Varying coding/inclusion of US GOP & UK Conservatives

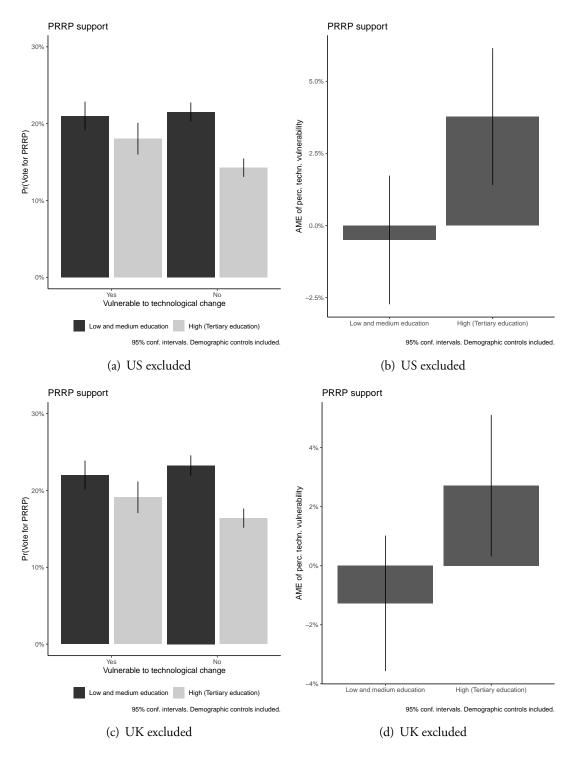

Figure S-16: Robustness checks: The conditional effect of higher education on support for PRRPs (excl. UK & US)

Notes: See Table S-7 for the detailed estimation results.

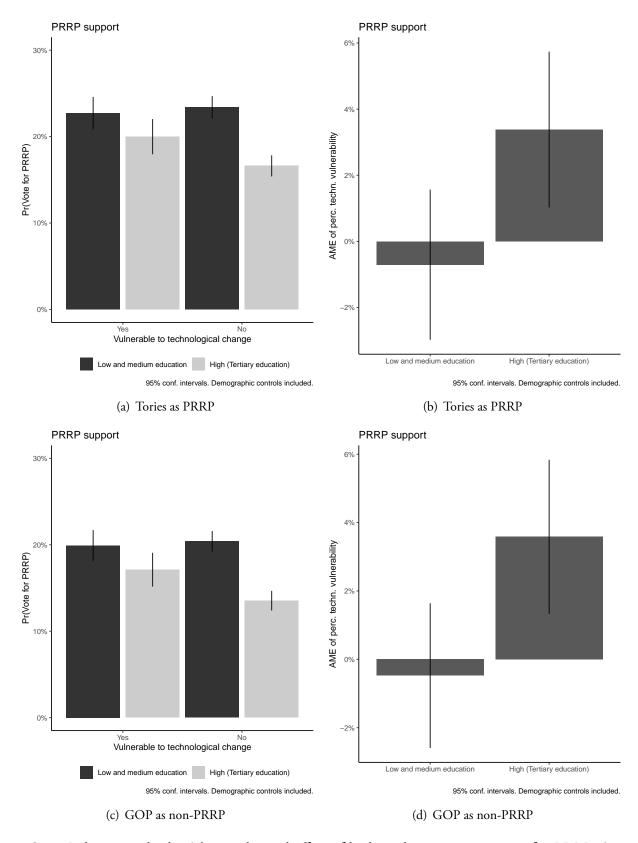

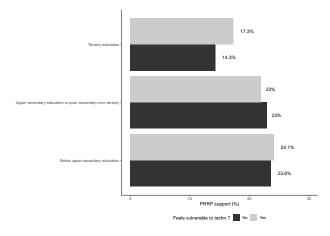

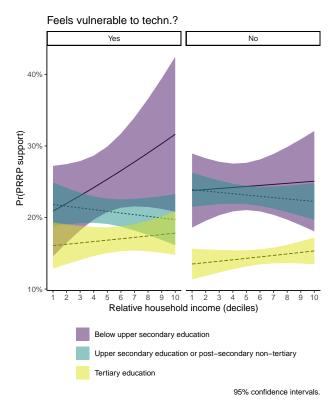

Figure S-17: Robustness checks: The conditional effect of higher education on support for PRRPs (varying coding of $GOP \ \& \ Tories$

Notes: See Table S-7 for the detailed estimation results.

3.1.6 PRRP support among lower- to medium-educated

(a) Descriptives

(b) Predicted probabilities

Figure S-18: Additional results: PRRP support among the lower-educated, conditional on perceived technological vulnerability & income

Notes: See Table S-8 for the detailed estimation results underlying graph (b).

3.2 Mediation analysis

3.2.1 Analysis of individual parts of causal mechanism

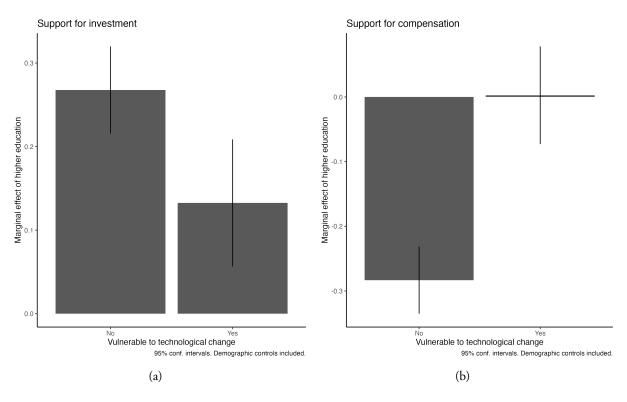

Figure S-19: The effect of higher education on policy attitudes, conditional on perceived technology risk

Notes: See Tables S-9 and S-10 below for the detailed regression results.

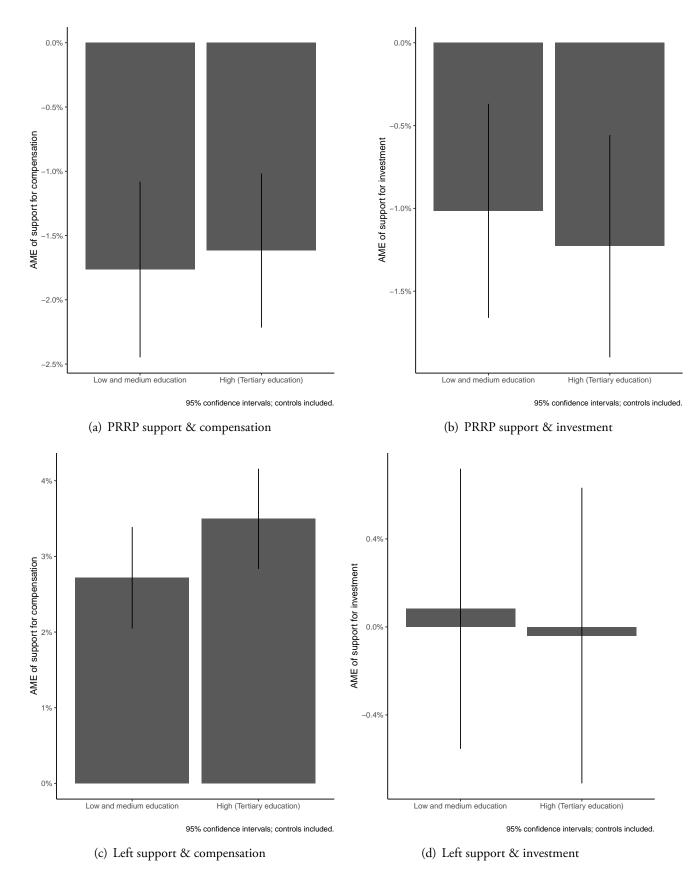

Figure S-20: The effects of policy support on party preferences, conditional on education

3.2.2 Main mediation results without controls

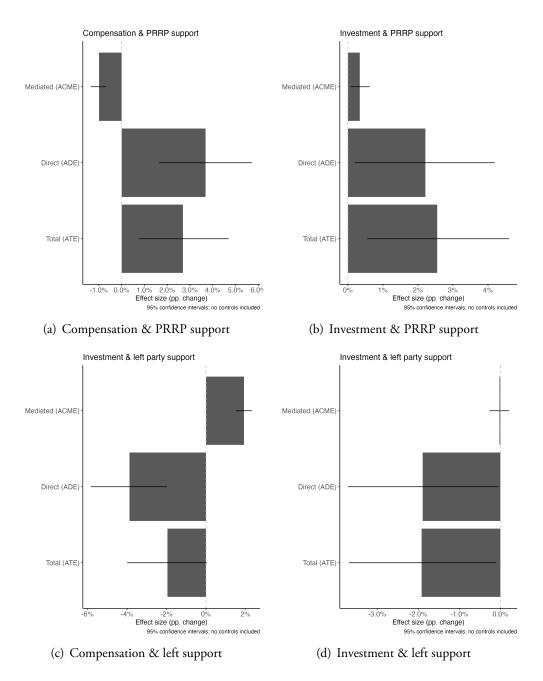

Figure S-21: Mediation effects among the higher-educated, no controls included

Notes: See Tables S-15, S-16 S-17, and S-18 for the underlying estimation results.

3.2.3 Other mediation results

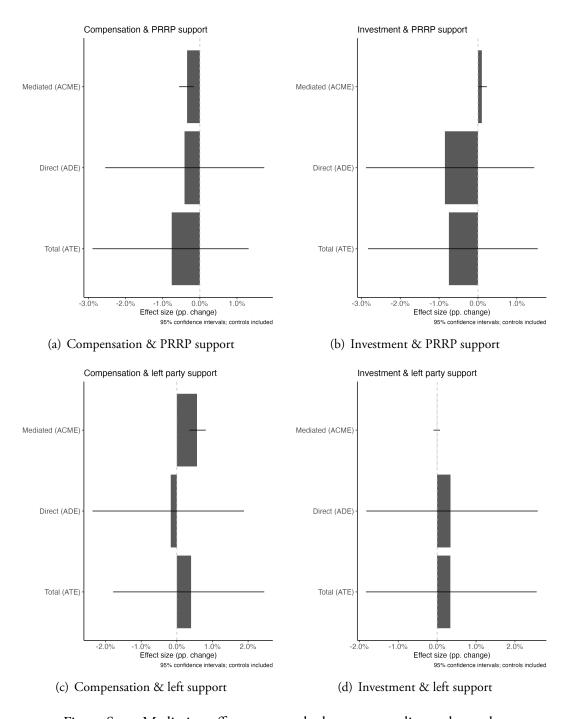

Figure S-22: Mediation effects among the lower- to medium-educated

Notes: See Tables S-15, S-16, S-17, and S-18 for the underlying estimation results.

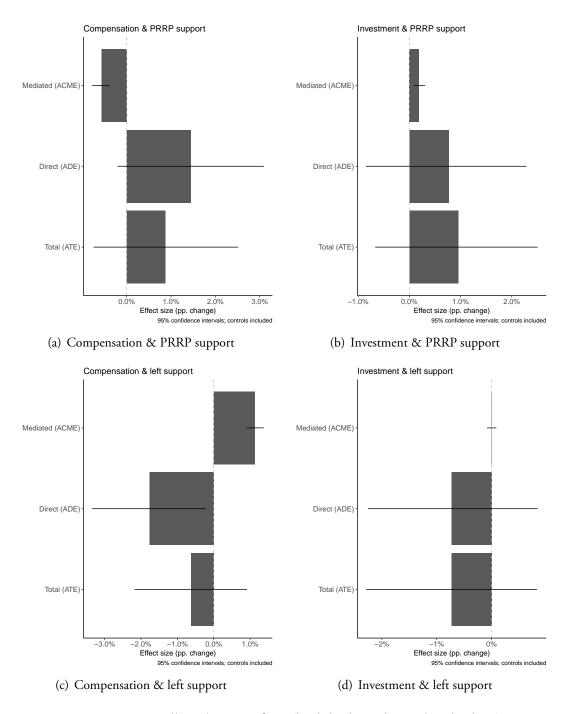

Figure S-23: Overall mediation effects (both higher-educated and others)

Notes: See Table S-13 for the underlying estimation results, and see Figure S-24 for the results of the sensitivity analysis that is based on the same models.

3.2.4 Sensitivity analysis

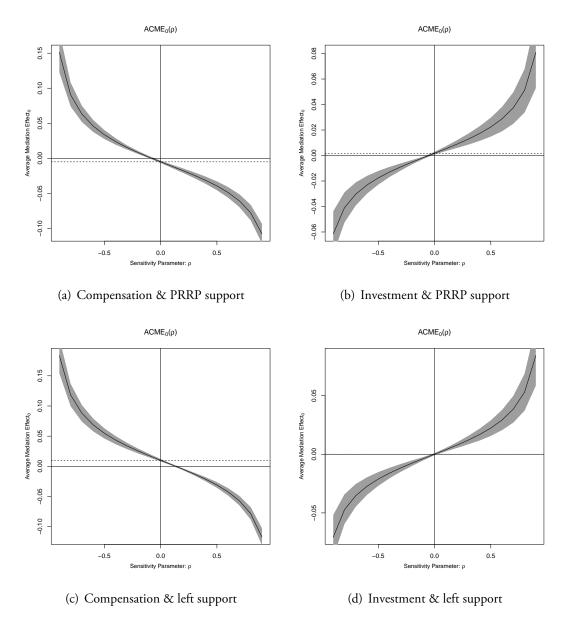

Figure S-24: Sensitivity analysis (ACMEs only; not differentiated between higher-educated and others)

Notes: This analysis assesses the sensitivity of the mediation (ACME or "indirect") effects to potential violations of the sequential ignorability assumption. The word "potential" is key: The analysis does not test if assumptions are in fact violated or not – it only assesses to what extent conclusions would change if assumptions were hypothetically violated. This is done by reestimating the ACME for different hypothetical degrees of correlation (ρ) between the residuals of the mediator and outcome models (see Imai et al. 2011, 776–777 for details). The fact that the size and sign of the ACME estimates change relatively quickly for different hypothetical values of ρ indicates that the results are sensitive to potential violations of the sequential ignorability assumption. All estimations are based on models including the full set of controls. See also Table S-13 for the underlying unprocessed model results.

4 Unprocessed regression results

4.1 Unprocessed results – Main analysis

(Starts overleaf.)

	Model 1	Model 2	Model 3	Model 4	Model 5
Intercept	$-1.40 (0.09)^*$	$-1.39 (0.10)^*$	$-1.42 (0.10)^*$	$-1.32 (0.21)^*$	-1.32(0.14)
