

Many thanks to Carl Henrik Knutsen for valuable comments and feedback during this process. Also, thanks to William Lowe and Hauke Licht for great feedback in the initial stages, and to Boram Lee, Charles Hankla and Erik Fjærli for very useful input in the final stages. Last, thanks to Sophie Boinnard for being my contact person at ISO, and to Laura Mathew and Anne Kristoffersen for sharing their interesting observations and for letting me interview them in the preliminary phases of this paper.
