Table S1. Results for individual sites used in the analysis. Great kiva sites are defined here as any non-great house site with one or more great kivas. The map codes relate the more geographically precise regions in the Chaco Social Networks database to the larger areas shown in Figures 8 and 9 in the main text. The date field contains starting dates calculated based on ceramic counts where such counts were present in the database; otherwise, the dates were taken from the original site data as recorded in the database.
