

Supplementary material

West *et al.* Postprandial incorporation of EPA and DHA from transgenic *Camelina sativa* oil into blood lipids is equivalent to that from fish oil in healthy humans

Supplementary Figure 1. Consort diagram

Supplementary Figure 2. Postprandial incorporation of EPA plus DHA into plasma triacylglycerol.

Values are mean (SEM) changes in concentration from baseline of EPA+ DHA in plasma triacylglycerol following consumption of test meals containing either CSO (solid symbols and lines) or BFO (open symbols and dashed lines). A, younger females (n 10); B, younger males (n 10); C, older females (n 10); D older males (n 6). The results of statistical analysis by ANOVA with Bonferroni's *post hoc* correction are described in Supplementary Table 1.
