

Effects of a low FODMAP diet on gut microbiota in individuals with treated coeliac disease having persistent gastrointestinal symptoms – a randomised controlled trial, A. M. Herfindal et al., 2023

Supplementary Table 1. Reaction mixture for amplicon PCR during library preparation for gene sequencing of 16S rRNA

Component	Per reaction (µL)
5x HOT FIREPol® Blend Master Mix Ready to Load (Solis BioDyne)	5
Forward primer ¹ , PRK341F (10 µM)	0.5
Reverse primer ¹ , PRK806R (10 µM)	0.5
Nuclease-free water	17
Template DNA	2

¹Forward 5'- CCTACGGGRBGCASCAG-3', reverse 5'- GGACTACYVGGGTATCTAAT-3' (1).

Supplementary Table 2. Temperature cycles used for amplicon PCR during library preparation for gene sequencing of 16S rRNA

Operation	Temperature (°C)	Duration	Number of cycles
Initial activation	95	15 min	1
Denaturation	95	30 sec	
Annealing	55	30 sec	25
Elongation	72	45 sec	
Final elongation	72	7 min	1
-	4	∞	-

Supplementary Table 3. Reaction mixture for index PCR during library preparation for gene sequencing of 16S rRNA

Component	Per reaction (µL)
5x FIREPol® Master Mix Ready to Load (Solis BioDyne)	5
Forward primer ¹ (1 µM)	5
Reverse primer ¹ (1 µM)	5
Nuclease-free water	8
Template DNA	2

¹See Supplementary Table 5.

Supplementary Table 4. Temperature cycles used for index PCR during library preparation for gene sequencing of 16S rRNA

Operation	Temperature (°C)	Duration	Number of cycles
Initial activation	95	5 min	1
Denaturation	95	30 sec	
Annealing	55	1 min	10
Elongation	72	45 sec	
Final elongation	72	7 min	1
-	4	∞	-

Effects of a low FODMAP diet on gut microbiota in individuals with treated coeliac disease having persistent gastrointestinal symptoms – a randomised controlled trial, A. M. Herfindal et al., 2023

Supplementary Table 5. Primers modified with Illumina adapters used for index PCR during library preparation for gene sequencing of 16S rRNA (2). Unique combination of forward and reverse primer was used for each sample

Primer name	Sequence, 5' → 3'	Target gene (region)	Direction

* $P < 0.05$.

¹Bacterial abundances (%) are presented as median [25th, 75th percentile]. FODMAP, fermentable oligosaccharides, disaccharides, monosaccharides, and polyols; LFD, low FODMAP diet.

²Within-group analysis: Wilcoxon signed-rank test between baseline and follow-up.

³Benjamini-Hochberg adjusted P values. Adjustments were performed separately for each taxonomic level.

Supplementary Table 7. Correlation between within-subject Bray-Curtis distances and changes in GSRS-IBS scores¹

Within-subject Bray-Curtis	GSRS-IBS					
	Total	Pain	Bloating	Constipation	Diarrhoea	Satiety

* *P* < 0.05.

¹Spearman's rank correlation coefficients (Rho) with corresponding *P* values are presented for the total population (*n* 69) and separately for the control (*n* 36) and low FODMAP diet (LFD, *n* 33) group. Change is defined as 4-week follow-up minus baseline value. Within-subject Bray-Curtis distance is defined as the Bray-Curtis distance of the baseline and follow-up sample from the same participant. Positive correlation indicates that smaller within-subject Bray-Curtis distances are associated with reduced GSRS-IBS scores, while negative correlation indicates that larger within-subject Bray-Curtis distances are associated with reduced GSRS-IBS scores. FODMAP, fermentable oligosaccharides, disaccharides, monosaccharides, and polyols; GSRS-IBS, Gastrointestinal Symptom Rating Scale IBS version; IBS, irritable bowel syndrome; LFD, low FODMAP diet.

Effects of a low FODMAP diet on gut microbiota in individuals with treated coeliac disease having persistent gastrointestinal symptoms – a randomised controlled trial, A. M. Herfindal et al., 2023

Caproic acid, %	<i>P</i> = 0.0264 * Rho= 0.27	<i>P</i> = 0.4815 Rho= 0.12	<i>P</i> = 0.0337 * Rho= 0.38

* *P* < 0.05.

¹Spearman's rank correlation coefficients (Rho) with corresponding *P* values are presented for the total population (*n* 66) and separately for the control (*n* 34) and low FODMAP diet (*n* 32) group. Change is defined as 4-wk follow-up minus baseline value. Positive correlation indicates that lower baseline SCFA are associated with reduced GSRS-IBS scores, while negative correlation indicates that higher baseline SCFA are associated with reduced GSRS-IBS scores. FODMAP, fermentable oligosaccharides, disaccharides, monosaccharides, and polyols; GSRS-IBS, Gastrointestinal Symptom Rating Scale IBS version; IBS, irritable bowel syndrome; LFD, low FODMAP diet; SCFA, short-chain fatty acids.

Effects of a low FODMAP diet on gut microbiota in individuals with treated coeliac disease having persistent gastrointestinal symptoms – a randomised controlled trial, A. M. Herfindal et al., 2023
