

Data supplement to Falkenberg et al. Clinical utility of magnetic resonance imaging in first-episode psychosis. Br J Psychiatry doi: 10.1192/bjp.bp.116.195834

Table DS1 Categories of abnormalities and referral

Abnormalities	Referral type	N in patients Sample 1	N in patients Sample 2
Cavum septum pellucidum	No further referral		12
Mild asymmetry of ventricles, lobes or brain	No further referral	2	2
Deviant shape of hippocampus	No further referral		
Enlarged Virchow-Robin spaces	No further referral		
Coarse ventricle abnormalities	Routine referral		
Postischemic lesions	Routine referral		1
Sella (partially) empty	Routine referral	1	2
Vascular abnormalities	Routine referral		
White matter abnormalities	Routine referral	1	14
Small benign cysts	Routine referral	2	6
Tumors (benign)	Routine referral		
Accentuated or prominent ventricles	Routine referral		
Local/global atrophy	Routine referral		
Tumors (malignant)	Urgent or immediate referral		
Acute stroke or hemorrhage	Immediate referral
