

Table S3. Group Differences in Indirect Effects for Participants Who Completed the Full CTQ-Short Form

	Estimate	SE	<i>z</i>	<i>p</i>
Controls vs CHR	0.10	0.05	1.56	0.12
Controls vs Depression	0.04	0.03	1.60	0.11
CHR vs Depression	-0.06	0.04	-2.15	0.03*

Note. After including only individuals who completed the full CTQ-Short-Form ($n = 152$), there was a significant difference in indirect effect between CHR ($n = 35$) and Depression ($n = 88$). There was not a significant difference in indirect effects between CC ($n = 29$) and CHR, or between CC and Depression.

$p < .05^*$
