

Figure S5. Multi-group structural equation model predicting anticipatory anhedonia for community controls ($n = 89$), CHR ($n = 94$), and Depression ($n = 196$) groups with the subset of participants who completed the study prior to the Covid-19 pandemic. Significant indirect effect was determined by the 95% confidence interval not including zero.

$p < .01^{**}$, $p < .001^{***}$.
