

Table S1. Group Differences in Indirect Effects When Individuals with Past Depressive Disorder are Removed from CHR group

	Estimate	SE	<i>z</i>	<i>p</i>
Controls vs CHR	0.15	0.04	3.52	0.001**
Controls vs Depression	0.05	0.03	1.70	0.09
CHR vs Depression	-0.11	0.04	-2.85	0.004**

Note. After removing individuals with past depressive disorders from the CHR group ($n = 65$), there was a significant difference in indirect effect between community controls ($n = 124$) and CHR ($n = 52$), as well as between CHR and Depression ($n = 285$). There was not a significant difference in indirect effect between the CC and depression groups.

$P < .01^{**}$
