

Supplementary Table S1. List of species from which COI (96 sequences, 62 species) and D2 (53 sequences, 38 species) sequences were used in the molecular phylogenetic study, including GenBank accession numbers and country of locality. First five species highlighted are the outgroup. Accession numbers in bold are sequences obtained from the GenBank database while the ones not in bold sequences are from our own collected samples. * = D2 sequences that were borrowed from other researchers and are previously unpublished.

Species number	GenBank accession numbers		Sample code	Species name	Country of collection
	D2	COI			
1	MH913490	KY983356	Ch01	<i>Cheumatopsyche ceres</i>	Thailand

¹Morphological adult characters and character coding used in this study for morphological phylogeny analysis.

Character 1—eye size (0 = with normal size and widely separated, 1 = large and almost meeting ventrally).

Character 2—head setal warts count (0 = 7, 1 = 5, 2 = 4, 3 = 3, 4 = 2).

Character 3—size of anterior warts on head (0 = small, usually smaller than posterior warts when present, 1 = large, usually larger than posterior warts when present).

Character 4—size of posterior warts on head (0 = large, 1 = small, 2 = absent).

Character 5—palps (0 = present, 1 = absent).

Character 6—forewing A1 (0 = A1 unmodified, 1 = part of a file-and-groove structure).

Character 7—forewing crossveins *c-sc* (0 = absent, 1 = present).

Character 8—forewing discoidal cell (0 = present and very evident, 1 = present but minute, 2 = absent).

Character 9—forewing base of *Rs* (0 = entire, 1 = obsolete).

Character 10—forewing coloration (0 = brown, 1 = black to dark brown with complicated wing markings, 2 = black to dark brown without white markings or with simple white streak coloration, 3 = yellow to light brown with dark brown bands in some species, 4 = pale to green especially for fresh materials, forewing without markings, 5 = pale to green with dark brown spots on forewings).

Character 11—inferior appendages of male genitalia (0 = two segmented, 1 = unsegmented).

Character 12—phallus apex shape (0 = ending incomplex apparatus, 1 = rounded or globular, 2 = rounded or globular with pointed apparatus or protrusions.

²Missing data are coded as “?”.
