

Biological drivers of individual-based anuran-parasite networks under contrasting environmental conditions

Karla Magalhães Campião, Wesley Dáttilo

Supplementary Figure S1. Median and confidence intervals (quartiles) of the variance in the similarity among parasite infracommunities of five anuran species from different habitat types (pasture and natural reserve). The beta diversity index was calculated considering parasite species composition with the Jaccard similarity index.

Supplementary Figure S2. Median and confidence intervals (quartiles) of the variance in the similarity among parasite infracommunities of five anuran species from different habitat types (pasture and natural reserve). The beta diversity index was calculated considering parasite species composition with the Sorensen similarity index.

Supplementary Table S1. Ecological attributes of individual-based networks of five anurans species and their parasites collected in contrasting environments.

Anuran species	Study site	Parasite richness	Host individuals	Interaction Diversity	Specialization	Nestedness	Modularity
<i>Leptodactylus chaquensis</i>	pasture	8	10	2.30	0.86	31.89	0.11
<i>Leptodactylus chaquensis</i>	reserve	9	10	2.55	0.70	45.07	0.08
<i>Leptodactylus fuscus</i>	pasture	7	17	2.55	0.74	44.64	0.06
<i>Leptodactylus fuscus</i>	reserve	6	8	1.97	0.68	54.38	0.04
<i>Leptodactylus podicipinus</i>	pasture	6	15	2.64	0.76	19.12	0.16
<i>Leptodactylus podicipinus</i>	reserve	6	12	2.27	0.78	26.70	0.10
<i>Pithecopus azureus</i>	pasture	6	6	1.64	1.00	40.04	0.04
<i>Pithecopus azureus</i>	reserve	5	8	1.95	1.00	29.82	0.04
<i>Pseudis paradoxa</i>	pasture	2	10	1.93	1.00	11.87	0.02
<i>Pseudis paradoxa</i>	reserve	5	11	1.53	0.95	13.84	0.56

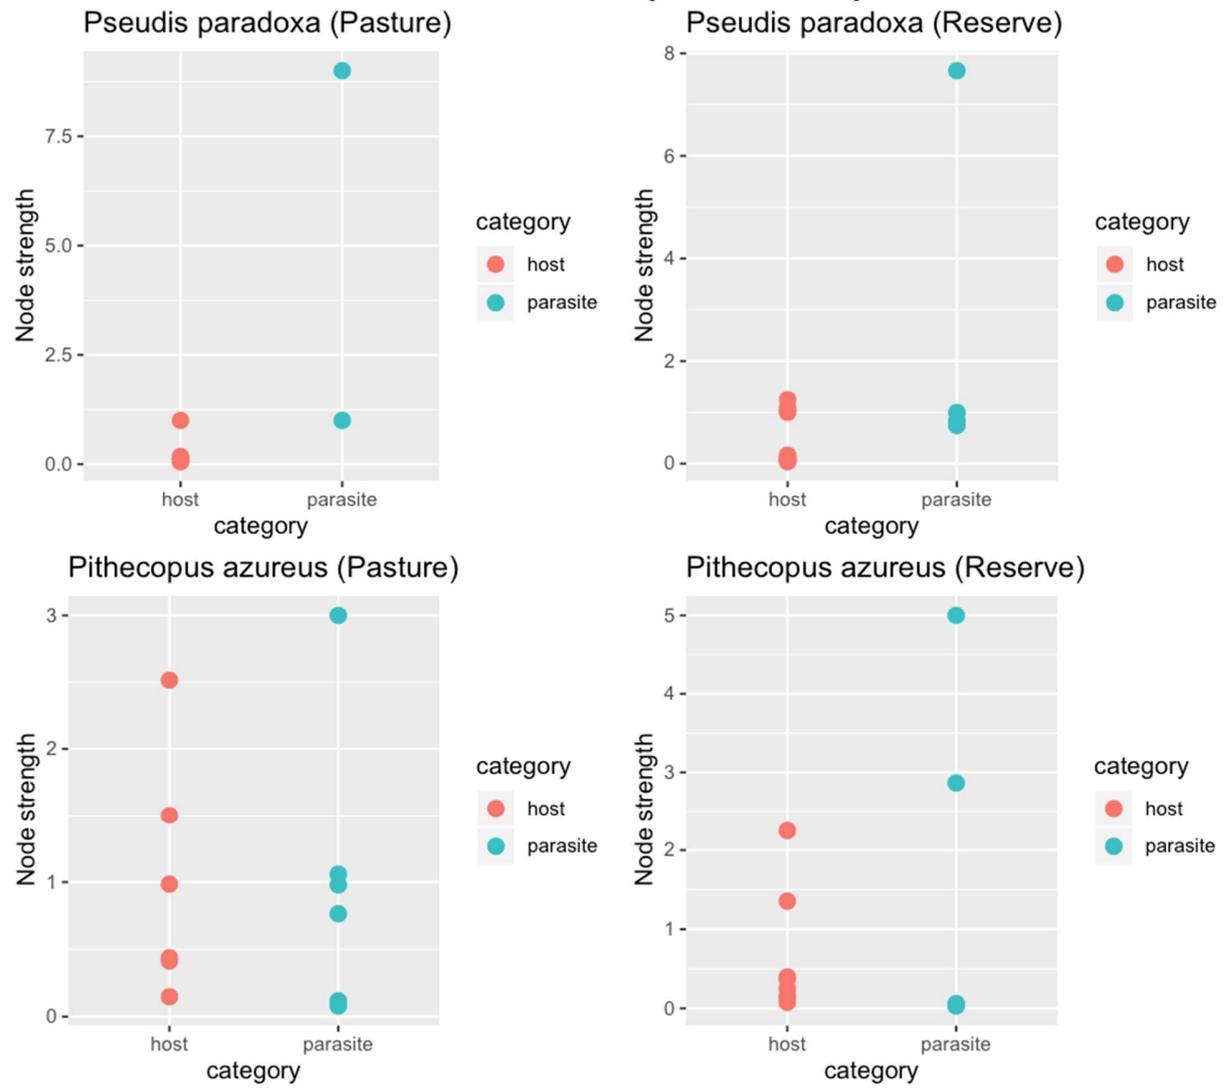

Supplementary Table S2. Interaction strength of parasite taxa in individual-based networks of five anurans species and their parasites collected in contrasting environments.
