

Supplementary Material Fig. S2. Bayesian ITS phylogeny of the clade containing the *Caloplaca exsecuta* group (arrowed) and the newly described species *Lendemeriella aureopruinosa* (delimited by the grey rectangle). Numbers at branches represent posterior probability (PP) values ≥ 0.95 . Newly sequenced specimens are indicated in bold. The GenBank accession numbers are indicated at the branch tips after the species names. Specimen information is presented in Table 1 and Supplementary Material Table S1.
