Appendix 1 Stranding probabilities of dead turtles ( $p_{\text {turtle }}$ ) as estimated from stranding probabilities of marked drifters ( $p_{\text {orange }}$ ) released in the upper, middle and lower parts of San Ignacio Lagoon (Figs 1 \& 3).

Appendix 2 Results from interviews with 22 local fishers asked to give a range for the number of boats working illegally in San Ignacio Lagoon (Figs $1 \& 3$ ) during summer, the approximate duration of the illegal guitar-fish fishery, and the number of turtles caught incidentally per boat per day.
