## Use it or lose it: measuring trends in wild species subject to substantial use

Megan Tierney, Rosamunde Almond, Damon Stanwell-Smith, Louise McRae, Christoph Zöckler, Ben Collen, Matt Walpole, Jon Hutton and Steven de Bie

Supplementary Material 1 Decision tree used to code whether a species listed in the Living Planet Index (LPI) is utilized

${ }^{1}$ A new version of the Red List utilization module is being released, which will
provide more specific and detailed information on the scale and scope of use and the
severity of the threat intentional use poses to species. These data are already coded
as part of the global bird assessment. The assessments for other species provide information on whether the species is used (in the case of birds, mammals, amphibians and some freshwater and marine fish) or threatened by use (for remaining classes) and this information forms the basis of the analysis presented in this study.
${ }^{2}$ CITES-listed species not in trade since being listed are currently coded as 'not in use' on the precautionary assumption that if a species has a CITES export quota but no permits have been registered it is unlikely that there is an international market for this species. This does not exclude the possibility of national or local-level use or illegal trade, and more information is needed on each of these species before they can be included in the list of 'used' species.
${ }^{3}$ The IUCN Utilization Classification Scheme consists of 17 categories of end use and was extracted from the report on a use classification workshop held at UNEPWCMC in June 2008 (http://intranet.iucn.org/webfiles/doc/SSC/RedList/AuthorityF/utilization.rtf).

Datasets used include:

## IUCN Red List

The IUCN Red List database includes 12,378 species, all classified as in use and/or threatened by use. It includes species in the global bird, mammal and amphibian assessments, the sampled Red List of marine and freshwater fish, plus additional phyla and classes considered to be threatened by use, including reptiles, molluscs and plants.

## CITES

The CITES trade database, managed by UNEP-WCMC on behalf of the CITES Secretariat, currently holds 7 million records of trade in wildlife and 50,000 scientific names of taxa listed by CITES. More than 500,000 records of trade in CITES-listed species of wildlife are reported annually.

Species were classified as 'used' if the CITES database recorded permits being issued between 1992 and 2006.

Regional or country-specific lists of species
EU Annex 4 lists non-CITES listed species in trade that the EU are actively monitoring.

Other
Avibase (World Bird Database) contains $\gg 5$ million records about 10,000 species and 22,000 subspecies of birds, including distribution information and taxonomy.

FAO Forestry Country Profiles database contains facts and information on forests, forestry and non-wood forest products for some 200 countries and regions.

International Tropical Timber Organization (ITTO) promotes the conservation and sustainable management, use and trade of tropical forest resources. The annual review statistics database contains information on forest products and trade.

Center for International Forestry Research (CIFOR) manages an extensive database on the use and trade of forest products.

FAO's Non-Wood Forest Product News (1994-2005)

The Sea Around Us project (University of British Columbia) collates catch time series on all fish and crustacean species landed worldwide.

FishBase is a global information system containing data on nearly all known fish species, including whether they are used by humans.

SUPPLEMENTARY MATERIAL 2 Tables S1-S5 include species and population numbers in each of the datasets used to generate trends in the Utilized Species and Harvest Indices.

TABLE S1 Species and population numbers in the utilized species database shown by vertebrate class, and in the utilized freshwater, marine and terrestrial species datasets shown by zone (temperate/tropical) and vertebrate class. Because some species occur in more than one system, the total number of species and populations in the Utilized Species database does not necessarily equal the sum total of species and populations in the Freshwater, Marine and Terrestrial datasets.

| Index | Description | Zone | Class | No. species | No. populations |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Utilized species | Based on trends in species that are utilized by humans |  | Amphibian | 40 | 118 |
|  |  |  | Bird | 865 | 3,543 |
|  |  |  | Fish | 303 | 1,177 |
|  |  |  | Mammal | 261 | 1,201 |
|  |  |  | Reptile | 32 | 175 |
|  |  |  | Total | 1,501 | 6,214 |
| Utilized freshwater species | Based on trends in utilized species that are found in a broad range of temperate and tropical freshwater habitats | Temperate | Amphibian | 21 | 81 |
|  |  |  | Bird | 148 | 1,056 |
|  |  |  | Fish | 83 | 599 |
|  |  |  | Mammal | 10 | 36 |
|  |  |  | Reptile | 8 | 21 |
|  |  |  | Total temperate | 270 | 1,793 |
|  |  | Tropical | Amphibian | 8 | 17 |
|  |  |  | Bird | 106 | 316 |
|  |  |  | Fish | 45 | 68 |
|  |  |  | Mammal | 5 | 13 |
|  |  |  | Reptile | 12 | 49 |
|  |  |  | Total tropical | 176 | 463 |
|  |  |  | Total freshwater | 446 | 2,256 |

| Utilized marine species | Based on trends in utilized species that are found in a broad range of temperate and tropical marine habitats | Temperate | Amphibian | 0 | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Bird | 94 | 737 |
|  |  |  | Fish | 143 | 400 |
|  |  |  | Mammal | 35 | 158 |
|  |  |  | Reptile | 3 | 24 |
|  |  |  | Total temperate | 275 | 1,319 |
|  |  | Tropical | Amphibian | 0 | 0 |
|  |  |  | Bird | 44 | 120 |
|  |  |  | Fish | 55 | 111 |
|  |  |  | Mammal | 10 | 29 |
|  |  |  | Reptile | 7 | 71 |
|  |  |  | Total tropical | 116 | 331 |
|  |  |  | Total marine | 388 | 1,650 |
| Utilized terrestrial species | Based on trends in utilized species that are found in a broad range of temperate and tropical terrestrial habitats | Temperate | Amphibian | 5 | 7 |
|  |  |  | Bird | 369 | 879 |
|  |  |  | Fish | 0 | 0 |
|  |  |  | Mammal | 66 | 478 |
|  |  |  | Reptile | 3 | 7 |
|  |  |  | Total temperate | 443 | 1,371 |
|  |  | Tropical | Amphibian | 9 | 13 |
|  |  |  | Bird | 207 | 420 |
|  |  |  | Fish | 0 | 0 |
|  |  |  | Mammal | 135 | 497 |
|  |  |  | Reptile | 1 | 1 |
|  |  |  | Total tropical | 352 | 931 |
|  |  |  | Total terrestrial | 795 | 2,302 |

TABLE S2 Species and population numbers for species that are used as food for humans, hunted for sport by humans, or used as pets, shown by vertebrate class, and in the utilized freshwater, marine and terrestrial species datasets shown by zone (temperate/tropical) and vertebrate class. Because some species occur in more than one system, the total number of species and populations in the database of all species used for food or sport hunting or as pets does not necessarily equal the sum total of species and populations in the freshwater, marine and terrestrial datasets.

| Index | Description | Zone | Class | Food <br> No. species | No. populations | Hunting <br> No. species | No. populations | Pets <br> No. species | No. populations |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

TABLE S3 Species and population numbers in the substantially used species database, shown by vertebrate class. Species and population numbers for vertebrates in the substantially used freshwater, marine and terrestrial species datasets are shown by zone (temperate/tropical) and vertebrate class. Because some species occur in more than one system, the total number of species and populations in the substantially used species database does not necessarily equal the sum total of species and populations in the freshwater, marine and terrestrial datasets. Only species in evidence categories 3 , 4 or 5 are included.

| Index | Description | Zone | Class | No. species | No. populations |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Substantially used species | Based on trends where evidence exists that species are substantially utilized by humans (based on scale of trade or volume of harvest at local, national, regional and international levels) |  | Amphibian | 0 | 0 |
|  |  |  | Bird | 27 | 124 |
|  |  |  | Fish | 77 | 322 |
