

Mammals of the Bhagirathi basin, Western Himalaya: understanding distribution along spatial gradients of habitats and disturbances

RANJANA PAL, SHAGUN THAKUR, SHASHANK ARYA
TAPAJIT BHATTACHARYA and SAMBANDAM SATHYAKUMAR

SUPPLEMENTARY FIG. 1 Predicted relationship among species photo-capture rate, habitat variables (ruggedness, elevation, slope) and anthropogenic pressures (records of people, livestock and dogs) as determined by generalized linear mixed models. The y-axis of each graph is depicting the photo-capture rate and the x-axis the variable value (elevation in m, slope in degree, and ruggedness as index).
