

Factors affecting presence and relative abundance of the Endangered volcano rabbit *Romerolagus diazi*, a habitat specialist

FELIPE OSUNA, ROGER GUEVARA, ENRIQUE MARTÍNEZ-MEYER,
 RAÚL ALCALÁ and ALEJANDRO ESPINOSA DE LOS MONTEROS

SUPPLEMENTARY FIG. 1 Interactions between explanatory variables related to patch occupancy by volcano rabbits *Romerolagus diazi* across the Sierra Chichinautzin and the Sierra Nevada. The solid line is the mean probability and the dashed lines indicate the standard error.

SUPPLEMENTARY FIG. 2 Interactions between explanatory variables related to relative abundance of volcano rabbits. The grid shows the mean predicted values by the model, and the stars indicate the actual observations.
