

Using community-based interviews to determine population size, distribution and nest site characteristics of Pallas's fish eagle in north-east Bangladesh

SAYAM U. CHOWDHURY, MOHAMMOD FOYSAL and NAZIM UDDIN KHAN

SUPPLEMENTARY FIG. 1 Distances between nearest neighbours among Pallas's fish eagle *Haliaeetus leucoryphus* nests (n), indicating that most nests are located close to each other and in an aggregated pattern.

SUPPLEMENTARY FIG. 2 Graphical representation of a Pallas's fish eagle nest site and habitat characteristics, with distances (mean \pm SD, $n = 53$) to wetland, human activity, houses, road and river.
