

## **SUPPLEMENTARY MATERIAL**

### **THE POPULARITY OF AUTHORITARIAN LEADERS A Cross-National Investigation**

By Sergei Guriev and Daniel Treisman

*World Politics*

doi: 10.1017/S0043887120000167

Replication data and Stata codes are available at:

Guriev, Sergei, and Daniel Treisman. 2020. "Replication data for: The Popularity of Authoritarian Leaders; A Cross-National Investigation." Harvard Dataverse, V 1. doi: 10.7910/DVN/8NGKDS.

For Gallup World Polls data for replication, please contact: [datainquiry@gallup.com](mailto:datainquiry@gallup.com)

## Appendix A: Additional Tables

**Table A1. Data sources**

Approval	"Do you approve or disapprove of the job performance of the leadership of this country?" % "yes."	Gallup World Poll
Interstate war	Dummy for state involved in episode of "interstate warfare" or "interstate violence"	Major Episodes of Political Violence and Conflict Regions, 1946-2012 (Monty Marshall, Center for Systemic Peace) www.systemicpeace.org/warlist.htm (MEPVCR)
Civil war	State involved in episode of "civil war," "ethnic war," "civil violence," or "ethnic violence."	MEPVCR
Homicide rate	Intentional homicides per 100,000 people	United Nations Office on Drugs and Crime, supplemented by data on individual countries from the Igarapé Institute's <i>Homicide Monitor</i> <a href="https://homicide.igarape.org.br/">https://homicide.igarape.org.br/</a> .
Growth rate of GDP per capita	Growth rate of real GDP per capita	World Bank, World Development Indicators.
Log GDP per capita	Natural log of GDP per capita at PPP in 2011 dollars	World Bank, World Development Indicators.
Log inflation rate	Natural log of (5 + inflation rate). (5 added to prevent exclusion of cases with negative inflation.)	World Bank, World Development Indicators, when available, plus IMF, World Economic Outlook database.
Unemployment	Unemployment rate	World Bank, World Development Indicators, when available, plus IMF, World Economic Outlook database.
Economic conditions good or excellent	"How would you rate economic conditions in this country today—as excellent, good, only fair, or poor?" Percent saying "excellent" or "good."	Gallup World Poll
Percent who felt safe walking alone at night	"Do you feel safe walking alone at night in the city or area where you live?" Percent saying yes.	Gallup World Poll
Percent who thought media had a lot of freedom	"Do the media in this country have a lot of freedom, or not?" % "yes."	Gallup World Poll
Press freedom	Press freedom index; adjusted so 0 = completely unfree, 100 = completely free.	Freedom House
Requests by governments or courts to Twitter to block tweets	Note that data begin in 2012.	Twitter
Requests by governments or courts to Google to "remove information from Google products, such as blog posts or Youtube videos."	Note that data begin in 2009	Google Transparency Report
Leader's years in office	Number of years the head of executive had been in office	DPI, see: Cruz, C., P. Keefer and C. Scartascini (2016). "Database of Political Institutions Codebook, 2015 Update (DPI2015)." IADB. Plus our updates.
Legislative or executive election year	Either legislative or executive election held this year	DPI
Amnesty	Political terror score, based on Amnesty International Reports	Amnesty International, from Political Terror Score database (PTS) (Gibney, Mark, Linda Cornett, Reed Wood, Peter Haschke, and Daniel Arnon. 2015. <i>The Political Terror Scale 1976-2015</i> . Date Retrieved, from the Political Terror Scale website: <a href="http://www.politicalterror-scale.org/">http://www.politicalterror-scale.org/</a> .)
State Department	Political terror score, based on US State Department Reports	US State Department, from PTS.
Polity2 score	Score. -10 = "pure autocracy," +10 = "pure democracy"	Polity IV dataset, Monty Marshall, Center for Systemic Peace,

		<a href="http://www.systemicpeace.org/polityproject.html">http://www.systemicpeace.org/polityproject.html</a> .
V-Dem democracy scores	Using e_v2x_api_4C, we code the bottom two categories ("Autocratic" and "Electoral Authoritarian") as non-democracies.	"V-Dem Codebook v.6." Varieties of Democracy (VDem) Project.
Deaths from natural disasters		EM-DAT Database, D. Guha-Sapir, R. Below, Ph. Hoyois – "EM-DAT: The CRED/OFDA International Disaster Database" – <a href="http://www.emdat.be">www.emdat.be</a> – Université Catholique de Louvain – Brussels – Belgium.
Deaths from terrorist attacks		Global Terrorism Database, <a href="https://www.start.umd.edu/gtd/">https://www.start.umd.edu/gtd/</a> .
Share of seats of opposition parties	At least one seat in parliament held by opposition party. More than 10 percent of seats in parliament held by opposition parties.	DPI
Percent with internet access at home.	Percent of respondents who said their home had access to Internet. In 2016, since GWP replaced this question, we use predictions from regression of this "home internet access" on lag of "home internet access", percent who said they had access to the Internet in some way, and percent who said they used Internet in previous 7 days ( $R^2=.98$ )	Gallup World Poll
Freedom of the Net Index	Index of Internet freedom. We use the 2007-08 pilot study figures for 2007 and 2008.	Freedom House
Perceived fear	Percent saying "most" or "many" afraid to discuss their political views	Gallup World Poll
Number killed in one-sided violence by the state	"Best estimate" of fatalities, one-sided violence, only cases with > 25 fatalities counted.	Uppsala Conflict Data Program, Department of Peace and Conflict Research, Uppsala University.

**Table A2: Non-democracies (Polity2 at start of year < 6) with GWP current and lagged approval data**

<i>Country</i>	<i>Years in data</i>	<i>Type</i>	<i>Estimated state political killings per year under incumbent leader (as of end of year, where IA or OD)</i>
Belarus	2007-10, 2014-16	IA (2007-15), U (2016)	0.2
Djibouti	2009	IA	0.3
Guinea	2012-16	IA (2012-15), U (2016)	8.2
Kazakhstan	2008-16	IA (2008-15), U (2016)	0.6
Mozambique	2008	IA	3.0
Russia	2008-16	IA (2008-15), U (2016)	2.3 <sup>a</sup>
Singapore	2008-11, 2014-16	IA (2008-15), U (2016)	0
Tanzania	2008-16	IA (2008-15), U (2016)	0.2
Burkina Faso	2008, 2011-15	IA (2008-14), U (2015)	1.4
Mauritania	2008-17	IA (2009-15), U (2008, 2016-7)	0.1
Ecuador	2008-16	IA (2008-15), U (2016)	0
Gabon	2012-16	IA (2012-15), U (2016)	0.8
Armenia	2008-16	IA (2008-15), U (2016)	1.1
Azerbaijan	2008-9, 2012-16	IA (2008-15), U (2016)	0.3
Venezuela	2009-16	IA (2009-11), U (2012-16)	0.5
Vietnam	2008-13	IA (2008-10), U (2011-13)	0.6
Yemen	2010-14	IA (2010-11), U (2012-14)	0.2
Angola	2012	OD	594.4
CAR	2011	OD	11.9
Chad	2008-16	OD (2008-15), U (2016)	61.0
Congo Brazzaville	2012-16	OD (2012-15), U (2016)	62.1
Congo Kinshasa	2012-16	OD (2012-15), U (2016)	40.3
Sri Lanka	2010-15	OD (2011-14), U (2015)	5750.0
Togo	2015-16	OD (2015), U (2016)	45.2
Uganda	2008-16	OD (2008-15), U (2016)	12.0
Cambodia	2008-17	OD (2008-15), U (2016-7)	16.1
Cameroon	2008-17	OD (2008-15), U (2016-7)	14.8
Zimbabwe	2008-16	OD (2008-15), U (2016)	880.4
Bangladesh	2008-16	OD (2009-15), U (2008, 2016)	53.3
Kyrgyzstan	2008-11	OD (2008-9), U (2010-11)	18.2
Nigeria	2008-15	OD (2010-14), U (2008-9, 2015)	240.0
Pakistan	2008-10	U

Myanmar (Burma)	2013-16	U	
Niger	2010-11	U	
Ethiopia	2014-16	U	
Somalia	2015-16	U	
Sudan-North	2015-16	U	
Thailand	2008-11, 2015-16	U	
Turkey	2015-16	U	
Ukraine	2015-16	U	
Zambia	2008	U	

**Source:** Gallup World Poll, Polity IV, Guriev and Treisman (2019).

**Notes:** IA: Informational autocracies; OD: Overt dictatorships; U: Unclassified non-democracies. Types based on killings under leader in power at end of year (unless he took power after GWP finished polling, in which case killings under his predecessor).

<sup>a</sup> political killings per year 2007-15 (before that country had Polity2 >= 6).

**Table A3: Imputed variables**

<i>Variable</i>	<i>Percent of observations used in regressions that are imputed</i>	<i>Mean data with imputations (SD data with imputations)</i>	<i>Mean original data (SD original data)</i>
Percent who thought economic conditions “good” or “excellent” (GWP)	20	28.5 (16.6)	27.2 (16.2)
Unemployment rate	2	6.7 (5.1)	6.7 (5.0)
Log inflation rate	8	2.4 (.6)	2.4 (.6)
Percent who believe media have a “lot” of freedom (GWP)	18	52.1 (15.3)	51.1 (15.4)
Homicide rate	36	9.8 (9.8)	8.4 (10.4)
Political Terror Score (Amnesty International)	28	3.0 (1.1)	3.1 (1.0)
Political Terror Score (State Department)	14	3.2 (.9)	3.2 (.9)
Freedom House Freedom on the Net index	65	48.4 (13.2)	51.0 (12.7)
Percentage who think others afraid to express political opinions (GWP)	25	55.5 (14.3)	55.9 (14.3)

Figure A2: Distribution of estimated state political killings per year under dictators in power (for at least 5 years), all 1945-2016 cases

Source: Guriev and Treisman (2019).

**Figure A3. Correlates of government approval, broken down among “informational autocracies,” “overt dictatorships,” and “unclassified” non-democracies.** Each point represents the estimated effect on approval of a one-unit increase in the given variable. Lines represent 95% confidence intervals. See Table A5, column 6 for full regressions.

## Online Appendix B: Simulations

### Methodology

To simulate, we use the model in Table 1, column 8. The simplest way to simulate would be to use model predictions. Since the model estimated is:

$$r_{i,t} = \alpha r_{i,t-1} + \mathbf{X}'_{i,t} \boldsymbol{\beta} + \gamma_i + \delta_t + \varepsilon_{i,t},$$

the predictions  $\hat{r}_{it}$  can be generated in the standard way:

$$\hat{r}_{i,t} = \hat{\alpha} r_{i,t-1} + \mathbf{X}'_{i,t} \hat{\boldsymbol{\beta}} + \hat{\gamma}_i + \hat{\delta}_t.$$

Forecasts thus calculated are shown in Figure B2.

However, predictions calculated in the standard way include in each period the actual value of the lagged dependent variable,  $r_{i,t-1}$ . They are thus anchored to the actual series. A stronger test is to proceed iteratively, using the prediction as of year  $t-1$  as the lagged dependent variable when calculating the predicted value for year  $t$ . That is, we calculate “iterative predictions,”  $\tilde{r}_{i,t}$ , where

$$\begin{aligned}\tilde{r}_{i,1} &= \hat{r}_{i,1}, \\ \tilde{r}_{i,2} &= \hat{\alpha} \tilde{r}_{i,1} + \mathbf{X}'_{i,2} \hat{\boldsymbol{\beta}} + \hat{\gamma}_i + \hat{\delta}_2, \\ \tilde{r}_{i,3} &= \hat{\alpha} \tilde{r}_{i,2} + \mathbf{X}'_{i,3} \hat{\boldsymbol{\beta}} + \hat{\gamma}_i + \hat{\delta}_3,\end{aligned}$$

and so on. In this method, errors cumulate over time, allowing the simulated series to stray far from the correct values. We show predictions calculated in this way in Figure B1.

For convenience, in the calculations we use the fact that for all  $t > 2$

$$\tilde{r}_{i,t} = \hat{r}_{i,t} + \hat{\alpha} (\tilde{r}_{i,t-1} - r_{i,t-1})$$

Because there are some gaps in the approval series, we interpolate linearly to fill internal gaps before calculating the predictions. (The regressions themselves do not involve any interpolations or imputations in the dependent variable). Since the World Bank data on growth and GDP per capita in Venezuela are missing for 2014-16, we use growth rates from the IMF’s World Economic Outlook database to generate these missing observations for the simulations.

Iterative predictions generated in this more demanding way (see blue dashed line in Figure B1) are more accurate for some countries than for others. For Russia, the predictions capture the trend well, although they do not capture the full leap in approval in 2014 that we associate with the Russian annexation of Crimea. Venezuela’s forecast is also quite accurate. Note, however, that actual approval is above the prediction during the Chavez presidency, but immediately falls below it once Maduro takes over in 2013, suggesting the importance of individual leaders. Turnover of leaders has been shown to have various other consequences—from institutional change (Jones and Olken 2009) to economic growth (Jones and Olken 2005). For Ecuador, the model gets the trend right, but the rise is more gradual than in reality. The plot for Kazakhstan suggests that we have missed some factor that helps to account for Nazarbaev’s surge in 2015; this might be a very large election effect.

The purple dashed lines show simulated values recalculated supposing that economic performance in 2008-14 had remained at the average level for 2005-7. That is, we imagine away the effects of the global economic crisis of 2008-9. Specifically, we calculate the average “objective” economic perception for 2005-7—that is the value for economic perceptions that could be predicted from the country’s income level, growth rate, and inflation and unemployment rates. We then fix objective economic perceptions at this level in the following years, and calculate model predictions based on this.

This casts light on the influence of economic factors on government approval. In Russia and Venezuela, the models suggest the government would have been substantially more popular in the post-crisis years had economic growth remained strong (the purple dashed line is above the blue dashed line). For Kazakhstan, economic performance only deteriorated significantly in 2015-16, and in Ecuador, performance was actually better after 2008 than before.

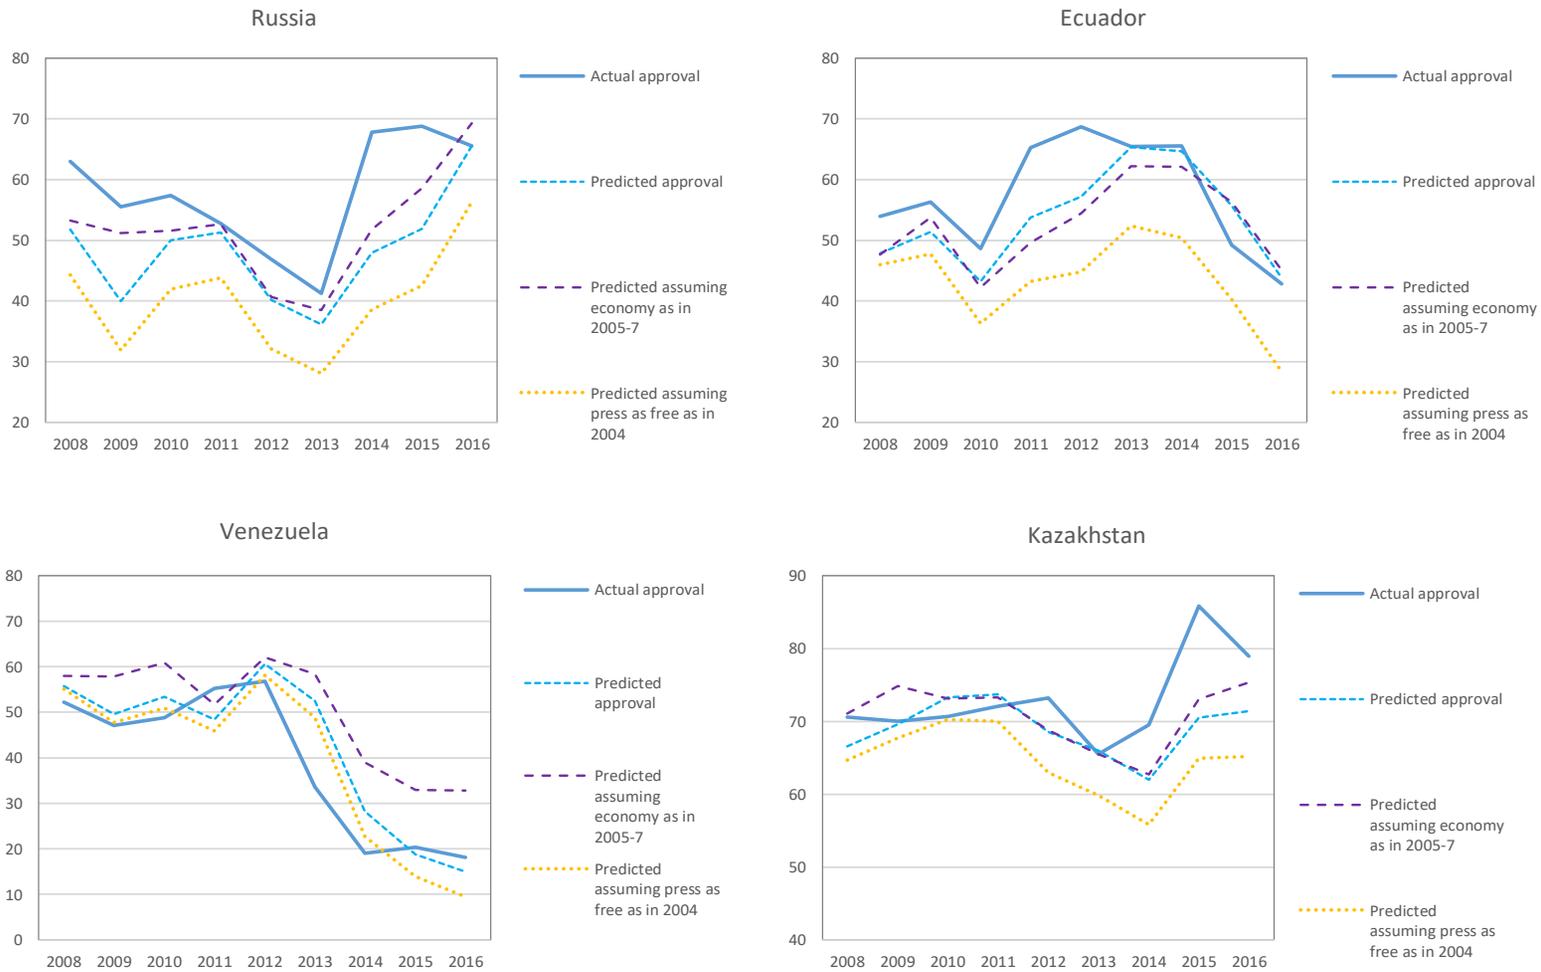

Finally, the yellow dotted line is calculated fixing the level of media freedom at its 2004 value. In other words, it shows predicted approval had there been no subsequent tightening of press restrictions. Both Putin in Russia and Correa in Ecuador appear to have received a significant boost from their manipulation of the media (there is a sizeable gap between the blue dashed line and the yellow dotted one). In Ecuador, the contribution of such manipulation rises from 2011, as President Correa’s rating soars alongside tightening press restrictions. The coefficient is significant and gradually increasing in Kazakhstan as well after 2011. In Venezuela, too, decreasing press freedom made a small but growing contribution to the leader’s approval.
