

Utility of DSM-5 Section III BPD Traits

Table S4. Multiple regression analyses predicting each of the 25 PID-5 facets from the dummy-coded presence of each of the 10 DSM-5 Section II PDs, simultaneously

Note. Individual PID-5 facets are dependent variable whereas the 10 binary PD variables are predictor variables. Standardized regression coefficients are reported. Coefficients in bold are significant at the .05 level. AVD = Avoidant PD, DEP = Dependent PD, OBS = Obsessive-Compulsive PD, PAR = Paranoid PD, SZP = Schizotypal PD, SCH = Schizoid PD, HIS = Histrionic PD, NAR = Narcissistic PD, BOR = Borderline PD, ANT = Antisocial PD.
