

Supplemental Figure 1. Bootstrap Confidence Intervals for Edge Weights

A. Acute Population

B. PNS Population

(A) Acute population, (B) Predominant negative symptom (PNS) population.

In both patient populations, there is overlap between the sample and bootstrap means. Due to the high density of the item pairs, only the range of the edge weight values are shown without the names of the individual pairs. Sample edge weights equal to zero indicate weak relationships omitted by the network estimate procedure.
