

SUPPLEMENTAL MATERIALS

About

The digital 3D representations of the ballcourt carvings documented in the Quiechapa region can be visualized on Sketchfab.com. Below is the link to the collection that contains all 30 of the carving described in the article. Annotations have been used to indicate the location of each carving on the 3D model of the natural rock outcrops. Use the ‘Model Inspector’ in the bottom right of the viewing pane to switch to ‘Matcap’ mode. This removes the photorealistic texture and only shows the morphology making it easier to view the carvings.

In addition, figures have been produced of each ballcourt carving at El Gentil. Each figure contains (a.) an image of the natural rock outcrop where the carving is located, (b.) an image of the same rock outcrop without texture (matcap version), (c.) an elevation model with scale of the carved element, and (d.) a cross-section of the ballcourt carving (cross-section indicated on the elevation model). A map with the spatial layout of the natural rock outcrops can be found in Figure 5 of the article.
