### **ONLINE APPENDIX**

**Figure A1.** Daily measures of total precipitation and maximum/minimum temperatures in Metro Cebu, 1978-1987.

**Figure A2.** Maps of the Phillipines (left) and world (right) from an example sector (residential/commercial). Top row: RETRO carbon monoxide emissions. Bottom row: RETRO ozone precursor emissions.

**Figure A3.** Maps of point and non-point sources of pollution. Top row: point sources by industry (left) and pollutant type (right). Middle row: land use in 1985 (left) and zoning in 1980s (right). Bottom row: road network in 1980s.

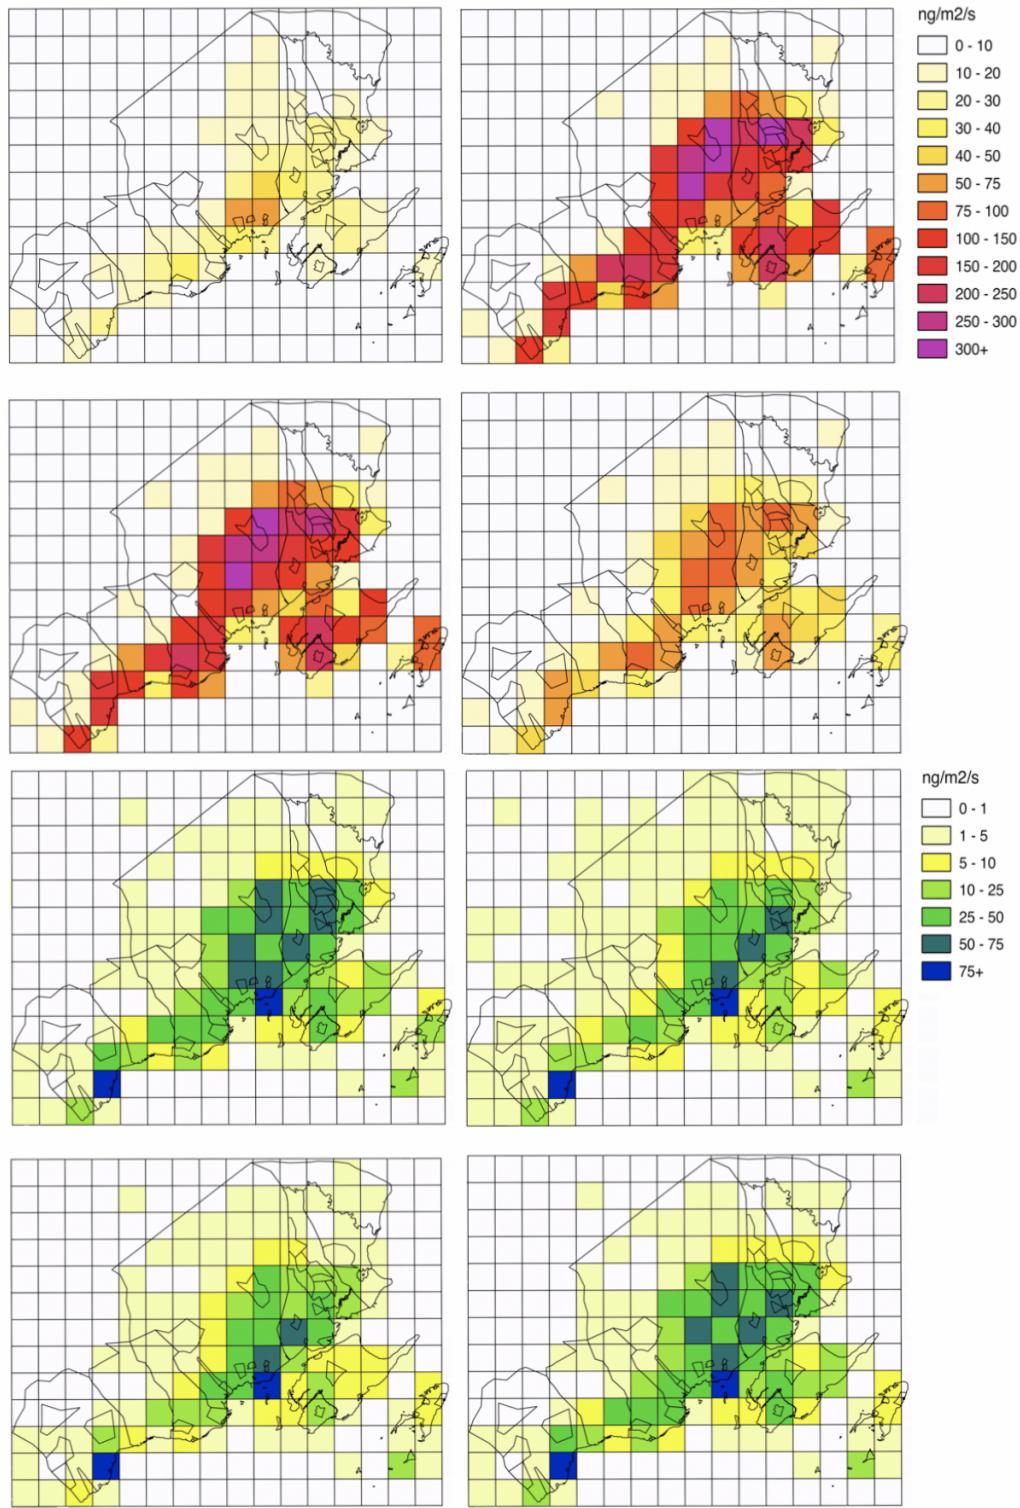

Figure A4.  $\hat{E}_{mjq}$ : maps of estimated  $\text{CO}$  (top 2 rows, red scale) and estimated  $\text{O}_3$  (bottom 2 rows, green scale) emissions by micro-environment for each quarter (Q1 top left, Q2 top right, Q3 bottom left, Q4 bottom right) of a selected year.

**Table A1.** Correlation matrix of pollutant types

	Carbon monoxide	Nitrogen oxides	Volatile organic compounds
<b><i>Fetal Exposures</i></b>			
Carbon monoxide	1		
Nitrogen oxides	0.05	1	
Volatile organic compounds	-0.068	0.422	1
<b><i>Fetal and First Year Exposures</i></b>			
Carbon monoxide	1		
Nitrogen oxides	0.069	1	
Volatile organic compounds	-0.062	0.421	1
<b><i>Fetal and First Two Year Exposures</i></b>			
Carbon monoxide	1		
Nitrogen oxides	0.07	1	
Volatile organic compounds	0.061	0.421	1

*Notes:* Data from RETRO emissions database. Volatile organic compounds here is a combination of benzene, toluene and xylene. The 3 pollutants listed here are combined to 2 in the analysis (CO and O<sub>3</sub>) based on the high correlation seen here between NOx and VOCs, as well as principle component analysis, and basic understanding that the interaction between NOx and VOCs in sunlight produce ozone.

**Table A2.** Emissions in Cebu compared to other cities

	Mean quarterly emissions (1982-1986), ng/m <sup>2</sup> /s			
	Q1	Q2	Q3	Q4
<b><i>Cebu, Philippines</i></b>				
Carbon Monoxide (CO):	1,461.80	9,334.19	7,521.09	1,378.73
Ozone (O <sub>3</sub> ):	1,012.09	1,147.94	1,111.45	1,031.83
<b>Comparably Sized Cities</b>				
<i>Kanpur, India</i>				
Carbon Monoxide (CO):	2,617.47	1,255.00	798.72	2,393.26
Ozone (O <sub>3</sub> ):	991.94	1,373.35	1,315.72	860.71
<i>San Diego, United States</i>				
Carbon Monoxide (CO):	7,197.12	7,841.40	7,649.59	7,666.75
Ozone (O <sub>3</sub> ):	1,753.17	1,778.15	1,815.97	1,701.74
<b>Other Developing Country Cities</b>				
<i>Manila, Philippines</i>				
Carbon Monoxide (CO):	45,685.55	24,067.69	16,649.71	42,286.77
Ozone (O <sub>3</sub> ):	2,506.12	3,471.03	3,321.27	2,177.36
<i>Rio de Janeiro, Brazil</i>				
Carbon Monoxide (CO):	2,180.82	3,381.90	3,452.79	2,563.32
Ozone (O <sub>3</sub> ):	6,800.00	5,968.92	6,297.22	6,671.63

*Notes:* Emissions come from the .5x.5 latitude-longitude grid of RETRO emissions dataset.

**Table A3.** RETRO emissions by source type and sector

	Mean and Standard Deviation of monthly average emissions in ng/m <sup>2</sup> /s				
	1982	1983	1984	1985	1986
<b><i>Point Sources:</i></b>					
<b><i>Carbon Monoxide (CO):</i></b>					
Industrial Combustion	7.58 (0.32)	10.09 (0.43)	9.31 (0.39)	9.20 (0.39)	8.39 (0.35)
Power Generation	5.79 (0.51)	6.25 (0.55)	5.56 (0.49)	5.34 (0.47)	4.45 (0.39)
<b><i>Ozone (O<sub>3</sub>):</i></b>					
Industrial Combustion	48.38 (2.05)	55.97 (2.37)	47.75 (2.02)	44.27 (1.87)	42.90 (1.81)
Power Generation	144.95 (12.79)	153.73 (13.57)	136.32 (12.03)	130.53 (11.52)	116.82 (10.31)

<i>Standard Controls:</i>	Yes									
<i>Observations:</i>	3,061									
<i>Partial F-Statistic:</i>	94.292									

*Notes:* These estimates are for the first stage corresponding to CO exposures occurring during pregnancy. The first stages corresponding to O3 and to other exposure windows (from conception to age 1 and from conception to age 2) are not shown here. First stage regressions also include the full set of control variables. The partial F-statistic does not include the control variables. Standard errors are clustered at the barangay (smallest administrative district) and birth quarter level. Significance levels are indicated by \*\*\* 1%, \*\* 5%, \*10%.
