Appendix S1. Experimental procedure

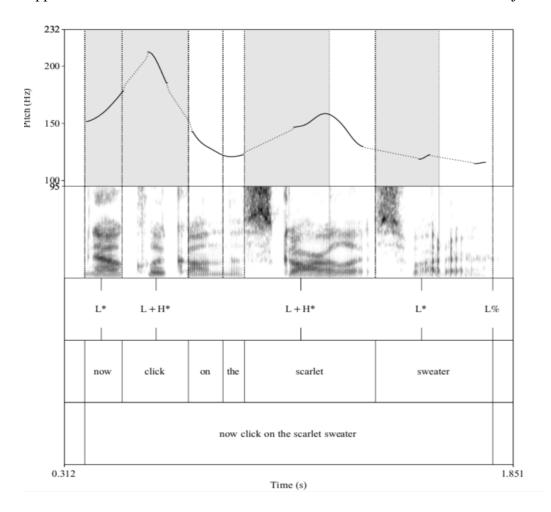

the participants hear the target instruction,

e.g., Now click on the SCARLET mittens.

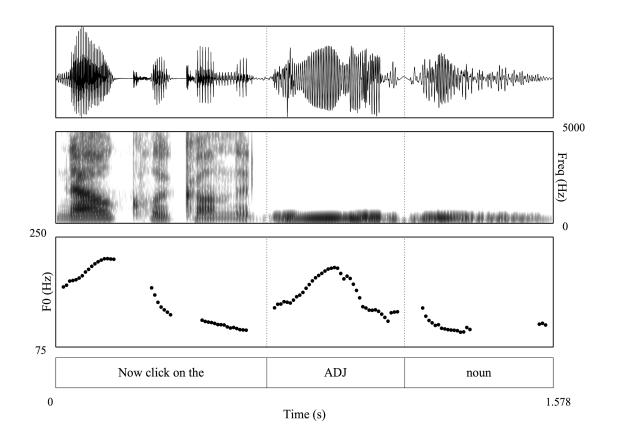

stay with the context for 800 ms.

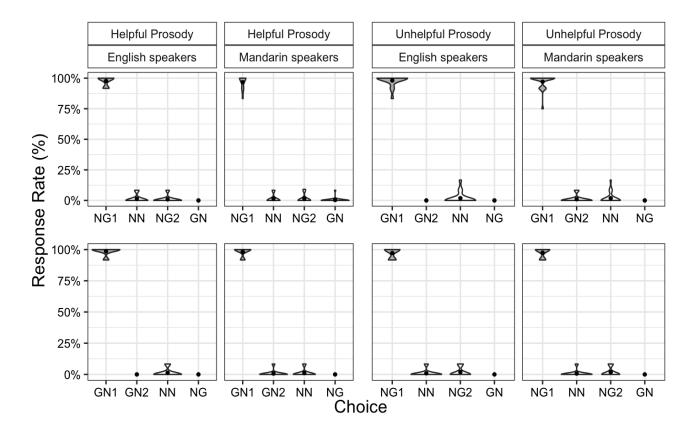

Appendix S2. ToBI transcribed instruction stimulus with the focus on the adjective

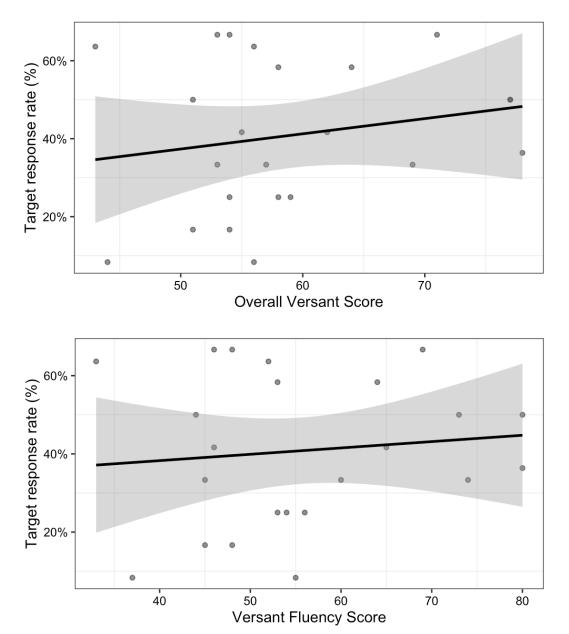

Appendix S3. Audio file with two NPs low-pass filtered and combined.

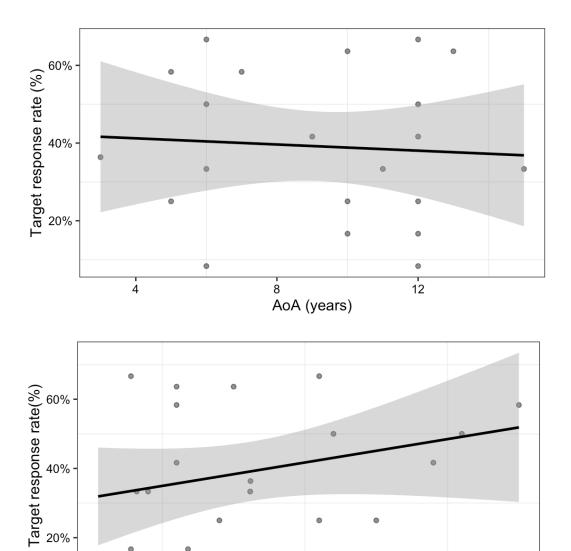

Appendix S4. English and Mandarin speakers' proportions of responses to each choice for ADJ-focus prosody (top) and for NOUN-focus prosody (bottom), unmasked speech. The length of the violins represents the range of *y* values; the width of the violins represents the density at a given *y* value; and the black dots represent the mean. The first dark grey violin in each panel indicates clicks on the choice that is consistent with the target segmental information. N stands for 'New' and G for 'Given'.

Appendix S5. Bivariate plots of Mandarin speakers' individual background factors and their ability to choose a prosodically appropriate item with masked stimuli in the ADJ-focus, Helpful Prosody condition.
