

Supplementary Figure 1. 1611 specifically stains fibroblasts in the heart. **A–D:** Confocal micrograph of murine left ventricle showing 1611 staining (red) of cardiac fibroblasts, myocytes with phalloidin (green), and nuclei with DAPI (blue). **E–H:** Confocal micrograph of murine left ventricle showing vimentin staining (red) of cardiac fibroblasts, myocytes with phalloidin (green), and nuclei with DAPI (blue). 1611 antibody and antivimentin antibody stain the same cell population in the heart. Scale bars are shown in individual panels.
