NNIPS-2 Maternal Supplementation Trial (1994-1997)	Enrollment at Index Pregnancy ^a
	n = 2,263 mothers
	145 moved / lost 323 live births prior to antenatal visit 68 miscarriages / stillbirths 3 maternal deaths 512 refused clinic visit 83 biospecimens unavailable Antenatal Clinic Attendance b n = 1129 mothers
	78 not pregnant
	53 miscarriages / stillbirths 2 maternal deaths
	38 multiples births
	Live, singleton births
	n = 958 infants
	242 not met / refused 271 biospecimens unavailable
	Post Partum Clinic Attendance ^c
	n = 445 mothers & infants
NNIPS Cohort Follow-Up Study (2006-2008)	7 died / permanently moved
	20 not met by follow-up teams
	Completed NCFU Interview
	n = 418 children
	68 not met by biospecimen team 20 insufficient plasma samples
	Provided Biospecimen for NCFU
	n = 290 children

^a Participants may have had more than one pregnancy during the NNIPS-2 trial; only 1st reported pregnancies (index) were considered for the immune programming study

 $^{^{}b}$ Includes only women who were present and provided biospecimen with $> 500~\mu L$ available for analysis

^c Includes only mother/infant pairs who were present and for whom at least one infant blood spot was available for analysis
