

There are two datasets used in this analysis. Information on files to download for the code is provided below.

1. The General Social Survey Data can be accessed here: <https://gss.norc.org/get-the-data/stata>. We start with the Cumulative Data Set (cross-sectional samples from all years, GSS 1972 - 2014). This data file is saved as GSS_72_14.dta in our analysis.
2. 4 ACS files can be downloaded from <https://usa.ipums.org/>. Our extract consists of 2002ACS, 2006ACS, 2010ACS, and 2014ACS samples. This file is saved as ACS.dta in our analysis.

Stata Code files description

1. `make_gss_marketdata.do` generates market level data in the GSS, which is saved as `GSS_marketdata.dta`.
2. `make_acs_gss_marketdata.do` generates market level data in the ACS and merges the GSS data together, which is saved as `ACS_GSS_marketdata.dta`.
3. `AKL_genderconflict_analysis.do` produces all of the tables in the paper and the online appendix.
