Suppl Fig 2

A: Levels of thiobarbituric acid reactive substances (TBARS), a marker of lipid peroxidation, estimated by a colorimetric method (n = 3-6). B: Serum alanine transaminase (ALT) activity, a marker of hepatic damage, estimated using a commercially available kit (n = 3-6). Each bar represents mean ± SE. * indicates p<0.05 when compared to corresponding pair-fed control.
