Fig. DS1  Functional connectivity maps of group means and group differences with the head of the (a) left and (b) right caudate nucleus.

Axial view of brain regions in radiological presentation showing significant connectivity ($Z > 2.3, P < 0.05$), overlaid on the mean structural scan of all study participants.

DLB, dementia with Lewy bodies; AD, Alzheimer’s disease; Con, controls.
Fig. DS2  Functional connectivity maps of group means and group differences with the (a) left and (b) right putamen.

Axial view of brain regions in radiological presentation showing significant connectivity ($Z > 2.3$, $P < 0.05$), overlaid on the mean structural scan of all study participants. DLB, dementia with Lewy bodies; AD, Alzheimer’s disease; Con, controls.
Fig. DS3  Functional connectivity maps of group means and group differences with the (a) left and (b) right thalamus (mediodorsal nucleus). Axial view of brain regions in radiological presentation showing significant connectivity ($Z^* > 2.3$, $P < 0.05$), overlaid on the mean structural scan of all study participants. DLB, Dementia with Lewy bodies; AD, Alzheimer’s disease; Con, controls.
